Re: Certification Request for Central Boiler Model – E-Classic 1450

Dear Mr. Tollefson:

Thank you for providing the Maryland Department of the Environment (MDE) with the requested documentation in order to obtain certification for your E-Classic 1450 hydronic heater in the state of Maryland. The Department has completed its review of the November 2011 emission testing report prepared by OMNI-Test Laboratories, Inc. (Report Number: 117-O-30-3) for Central Boiler that was received by this office on March 6, 2012. The test results indicate that the unit has a particulate matter emissions level of 0.18 lbs/MMBtu heat output (year round weighted average), which meets the 0.32 lbs/MMBtu heat output particulate matter emission limit required for Phase II units specified in §C(1)(b) under COMAR 26.11.09.11 – Control of Particulate Matter from Small Wood Boilers.

Based on MDE's review of the information submitted by Central Boiler, the Department has determined that the year round weighted average emissions for the Central Boiler Model – E-Classic 1450 hydronic heater complies with the emission limits for Phase II units as specified in the regulation. The Department hereby grants certification to Central Boiler for the E-Classic 1450, which will remain valid for five years upon the date of its issuance. All units in that model line are allowed to be distributed, sold, and installed in the State for a period of five years provided the units comply with the labeling requirements specified in the regulation.

Please be advised that any modifications to any current model line previously certified will require you to submit documentation requesting certification, as will the introduction of any additional model line you wish to make available for sale, use, and installation in Maryland. Should you have any questions, please feel free to contact me at 410-537-3592.

Sincerely,

Eddie DuRant, Regulatory Engineer
