Re: *TRADEPOINT ATLANTIC*
TIN MILL CANAL SEDIMENT SAMPLING AND ANALYSIS PLAN, ADDENDUM

Dear Ms. Brown and Mr. Fan:

On behalf of Tradepoint Atlantic and Sparrows Point LLC, enclosed please find an addendum to the Tin Mill Canal Sediment Sampling and Analysis Plan, Final that was previously approved on March 24, 2015 by U.S. EPA and MDE. A sampling plan addendum was also subsequently provided to document revised sampling procedures that was also approved by EPA and MDE (*Tin Mill Canal Sediment Sampling and Analysis Plan Addendum, dated 7/23/2015*). This submittal is being made in conjunction with the Administrative Consent Order (ACO) between Sparrows Point Terminal, LLC and the Maryland Department of the Environment (effective September 12, 2014) and the Settlement Agreement and Covenant Not to Sue (PPA) between Sparrows Point Terminal, LLC and the United States Environmental Protection Agency (effective November 25, 2014).

This document is an addendum to the approved work plan(s) that defines sampling and analysis procedures for further characterization of the TMC sediments to complete the following objectives:

- Provide further delineation of the extent of elevated polychlorinated biphenyl (PCB) compounds located between Transects 5-7,
- Recollect composite samples for semi-volatile compounds (SVOCs) at a number of transects for re-analysis to achieve lower laboratory reporting levels;
- Collect samples at several TMC locations where access was restricted during the previous sampling events.

This addendum is submitted for approval in conjunction with discussions of the proposed sampling effort discussed during the meeting with EPA and MDE held on April 21, 2016.

Please contact me at jcalenda@enviroanalyticsgroup.com should you have any questions and we look forward to your review of this information.

Sincerely,

James Calenda

Tin Mill Canal Sediment Sampling and Analysis Plan

Supplemental Sampling and PCB Delineation Addendum

Background

EnviroAnalytics Group, LLC (EAG) submitted a work plan to sample and analyze the sediments within the Tin Mill Canal (TMC) at the Tradepoint Atlantic (former Sparrows Point Terminal, LLC) property that was approved by US EPA (EPA) and the Maryland Department of the Environment (MDE) on 03/24/2015 (*Tin Mill Canal Sediment Sampling and Analysis Plan, Final, dated 03/06/2015*). A sampling plan addendum was also subsequently provided to document revised sampling procedures that was also approved by EPA and MDE (*Tin Mill Canal Sediment Sampling and Analysis Plan Addendum, dated 7/23/2015*).

The sampling plans and associated data collection efforts were designed to evaluate the physical and chemical characteristics of materials deposited in the bottom of the canal. Characterization of these materials is required to support design planning for efforts to remediate the canal and remove collected materials for recycling or disposal. Data associated with these approved plans was collected from 16 transects along the length of the TMC and from 1 transect along the channelway from the Pori Lagoon area as shown in **Figure 1**. The transects were located approximately 500 feet apart along the length of the TMC.

This document is an addendum to the approved work plan(s) that defines sampling and analysis procedures for further characterization of the TMC sediments to complete the following objectives:

- Provide further delineation of the extent of elevated polychlorinated biphenyl (PCB) compounds located between Transects 5-7;
- Recollect composite samples for semi-volatile compounds (SVOCs) at a number of transects for re-analysis to achieve lower laboratory reporting levels;
- Collect samples at several TMC locations where access was restricted during the previous sampling events.

This addendum is submitted for approval in conjunction with discussions of the proposed sampling effort discussed during the meeting with EPA and MDE held on April 21, 2016.

Sampling Plan

PCB Delineation

Results collected to date for total PCBs within the sediments of the TMC are included in **Table 1** and shown on **Figure 2**. Results for the PCB composite sample taken from the lower 12 inches of the sediment horizon; 2-4 feet from the sediment surface at Transect 6 (TM-SD-31) exhibited a concentration of Aroclor 1242 of 233 mg/kg. This concentration is an unusual outlier and is extremely elevated compared to the remainder of the PCB data for the TMC. Nearby samples recovered and analyzed for PCBs from Transects 5 and 7 in the lower 12 inches of the sediment horizon exhibited concentrations for total PCBs of 2.52 mg/kg and 8.13 mg/kg respectively. Samples recovered from the upper 12 inches of sediment from transects 5, 6 and 7 did not detect the presence of PCBs.

An additional 42 discrete sediment samples are proposed to be collected and analyzed for PCBs in order to delineate the extent of elevated PCB concentrations surrounding the TM-SD-31 location. These samples will be collected between Transects 5-7 from the top 12 inches and bottom 12 inches of the sediment horizon at 21 locations spaced approximately 50 feet apart. The proposed sample locations will be located through the centerline of the canal as shown on **Figure 3**.

SVOC Reanalysis

Results collected to date for SVOCs within the sediments of the TMC are included in **Table 1**. Laboratory results for SVOCs exhibited elevated reporting limits and associated non detections for composite samples recovered from the lower 12 inches of the sediment horizon at the following transects:

- Transect 6
- Transect 7
- Transect 8
- Transect 9
- Transect 10
- Transect 11
- Transect 12
- Transect 13
- Transect 14
- Transect 15
- Transect 16
- Transect 17

Based on feedback that was received from the laboratory, the elevated reporting limits for SVOCs were the result of matrix interference; specifically high moisture content and the presence of oil and grease.

Recollection of samples are proposed at these locations that will be analyzed for SVOCs in conjunction with specific laboratory methods utilized to provide lower reporting limits in impacted media with high moisture contents. These laboratory “clean up” methods will include acid cleaning, silica cleaning, GPC cleaning and running SIM; for which a trial was performed in April at the laboratory and acceptable reporting limits were achieved.

Inaccessible Sample Locations

Samples were not recovered at the following locations from Transects 11, 12 and 14 due to restricted access during the first two sampling events: TM-SD-54, TM-SD-56, TM-SD-57, TM-SD-59 and TM-SD-71. Access will be provided and sampling will be performed for the suite of analyses approved for the TMC characterization effort.

Sampling Procedures

The modified surge block sampling method described in the *Tin Mill Canal Sediment Sampling and Analysis Plan Addendum, dated 7/23/2015*) that was approved for use will be utilized for this sampling program. This method uses a modified surge block device similar in design concept as a well development system to collect soft sediment samples (suction sampler) otherwise that are unable to be collected with a core barrel sampler. The suction sampler apparatus consists of a 2 inch diameter PVC pipe and the surge block that includes two 1 7/8 inch diameter washers with a piece of rubber between them attached to a 1-inch PVC pipe.

To collect a sample the apparatus is driven into soft sediment, with the surge block at the bottom of the 2-inch tube, until the required sampling depth is achieved. Once at the desired sampling depth, the apparatus is withdrawn for a foot and lowered back to the bottom while pulling the surge block up through the interior of the 2-inch pipe, creating a vacuum and pulling the sediment into the sampler. The apparatus is then extracted, tilting it as the bottom reaches surface grade. Sample material is then recovered out of the tube into a plastic bag and then distributed as required to sample containers.

Samples will be preserved to 4 degrees Celsius immediately after recovery. Wide-mouth glass containers with Teflon-lined caps will be utilized for sediment samples with the recovered sample volume a function of the analytical requirements. Sediment will be transferred from the sample collection device to an appropriate sample container using a stainless steel or plastic lab spoon or equivalent. If composite samples are collected, sediment sample will be placed in a stainless steel, plastic or other appropriate composition (e.g.: Teflon) bucket, and mixed thoroughly to obtain a homogeneous sample representative of the entire sampling interval.

The sediment samples will be placed into labeled containers. Samples for volatile organic analysis will be collected directly from the bucket, before mixing the sample, to minimize loss due to volatilization of contaminants.

All sampling devices and non-disposable equipment that comes into contact with sediment will be decontaminated prior to reuse, in accordance with the following procedures.

- Remove adhered material from the sampling equipment by brushing and / or rinsing with tap water
- Wash with non-phosphate detergent and tap water
- Rinse with distilled water
- Repeat as necessary until all residue is removed
- Rinse with pesticide grade hexane and allow to air dry on a clean surface
- Rinse with distilled water
- Air dry or dry with clean, chemical free paper towels or shop cloths.

Analytical Methods

In order to fully define sampling locations, depths and analytical parameters; the following Tables are included:

- **Table 2**
 - Lists each sample to be collected, sample location, sample depth and summary of analyses to be performed.
- **Table 3**
 - Full list of all chemical parameters that are included within each analysis.

Sediment samples collected will be analyzed for chemical parameters as follows:

- The discrete sediment samples (42 total) that will be collected as part of the PCB delineation will be analyzed for PCB Aroclors 1016, 1221, 1232, 1242, 1248 and 1254 as shown in **Table 3**.
- The composite sediment samples (12 total) that will be recollected for semi-volatile reanalysis will be analyzed for specific Appendix IX SVOCs, as shown in **Table 3**.
- Samples from locations that were previously inaccessible will be analyzed as follows:
 - The discrete sediment samples (XX total) will be analyzed for specific Appendix IX VOCs and Appendix IX RCRA metals, including hexavalent chromium as shown in **Table 3**, of the previously approved TMC Sediment Sampling and Analysis Plan. This analytical subset includes VOC and metal analyses consistent with the approved plan established for the TMC. These discrete samples (4 total) will also be analyzed for the VOC analytes of the TCLP test procedure.
 - The composite samples (12 total) will be analyzed for the specific Appendix IX semi-volatile organic compounds (SVOCs), cyanide and PCBs aroclors as identified in **Table 3**. These samples will also be analyzed for the inorganic and semi-volatile analytes of the TCLP test procedure

Data Evaluation and Reporting

The sampling and analytical data developed from this effort will be incorporated with data previously collected for the TMC sediments. Data evaluation and reporting, including data validation processes, will be completed as prescribed in the original approved plan.

Data Validation Qualifier Code

J - The positive result reported for this analyte is a quantitative estimate.

J+ - The positive result reported for this analyte is a quantitative estimate, but may be biased high.

J- - The positive result reported for this analyte is a quantitative estimate, but may be biased low.

B - The compound/analyte was not detected substantially above the level of the associated method blank/preparation or field blank

U - This analyte was not detected in the sample. The numeric value represents the sample quantitation/detection limit.

UJ - This analyte was not detected in the sample. The actual quantitation/detection limit may be higher than reported.

NJ - This analyte has been "tentatively" identified. The numeric value represents its approximate concentration.

Y - This analyte coelutes with another target compound on the two chromatographic columns used for analysis.

R - The result for this analyte is unreliable. Additional data is needed to confirm or disprove the presence of this compound/analyte in the sample.

Data Validation Qualifier Code

J - The positive result reported for this analyte is a quantitative estimate.

J+ - The positive result reported for this analyte is a quantitative estimate, but may be biased high.

J- - The positive result reported for this analyte is a quantitative estimate, but may be biased low.

B - The compound/analyte was not detected substantially above the level of the associated method blank/preparation or field blank

U - This analyte was not detected in the sample. The numeric value represents the sample quantitation/detection limit.

UJ - This analyte was not detected in the sample. The actual quantitation/detection limit may be higher than reported.

NJ - This analyte has been "tentatively" identified. The numeric value represents its approximate concentration.

Y - This analyte coelutes with another target compound on the two chromatographic columns used for analysis.

R - The result for this analyte is unreliable. Additional data is needed to confirm or disprove the presence of this compound/analyte in the sample.

Data Validation Qualifier Code

J - The positive result reported for this analyte is a quantitative estimate.

J+ - The positive result reported for this analyte is a quantitative estimate, but may be biased high.

J- - The positive result reported for this analyte is a quantitative estimate, but may be biased low.

B - The compound/analyte was not detected substantially above the level of the associated method blank/preparation or field blank

U - This analyte was not detected in the sample. The numeric value represents the sample quantitation/detection limit.

UJ - This analyte was not detected in the sample. The actual quantitation/detection limit may be higher than reported.

NJ - This analyte has been "tentatively" identified. The numeric value represents its approximate concentration.

Y - This analyte coelutes with another target compound on the two chromatographic columns used for analysis.

R - The result for this analyte is unreliable. Additional data is needed to confirm or disprove the presence of this compound/analyte in the sample.

Data Validation Qualifier Code

J - The positive result reported for this analyte is a quantitative estimate.

J+ - The positive result reported for this analyte is a quantitative estimate, but may be biased high.

J- - The positive result reported for this analyte is a quantitative estimate, but may be biased low.

B - The compound/analyte was not detected substantially above the level of the associated method blank/preparation or field blank

U - This analyte was not detected in the sample. The numeric value represents the sample quantitation/detection limit.

UJ - This analyte was not detected in the sample. The actual quantitation/detection limit may be higher than reported.

NJ - This analyte has been "tentatively" identified. The numeric value represents its approximate concentration.

Y - This analyte coelutes with another target compound on the two chromatographic columns used for analysis.

R - The result for this analyte is unreliable. Additional data is needed to confirm or disprove the presence of this compound/analyte in the sample.

Data Validation Qualifier Code

J - The positive result reported for this analyte is a quantitative estimate.

J+ - The positive result reported for this analyte is a quantitative estimate, but may be biased high.

J- - The positive result reported for this analyte is a quantitative estimate, but may be biased low.

B - The compound/analyte was not detected substantially above the level of the associated method blank/preparation or field blank

U - This analyte was not detected in the sample. The numeric value represents the sample quantitation/detection limit.

UJ - This analyte was not detected in the sample. The actual quantitation/detection limit may be higher than reported.

NJ - This analyte has been "tentatively" identified. The numeric value represents its approximate concentration.

Y - This analyte coelutes with another target compound on the two chromatographic columns used for analysis.

R - The result for this analyte is unreliable. Additional data is needed to confirm or disprove the presence of this compound/analyte in the sample.

Data Validation Qualifier Code

J - The positive result reported for this analyte is a quantitative estimate.

J+ - The positive result reported for this analyte is a quantitative estimate, but may be biased high.

J- - The positive result reported for this analyte is a quantitative estimate, but may be biased low.

B - The compound/analyte was not detected substantially above the level of the associated method blank/preparation or field blank

U - This analyte was not detected in the sample. The numeric value represents the sample quantitation/detection limit.

UJ - This analyte was not detected in the sample. The actual quantitation/detection limit may be higher than reported.

NJ - This analyte has been "tentatively" identified. The numeric value represents its approximate concentration.

Y - This analyte coelutes with another target compound on the two chromatographic columns used for analysis.

R - The result for this analyte is unreliable. Additional data is needed to confirm or disprove the presence of this compound/analyte in the sample.

Data Validation Qualifier Code

J - The positive result reported for this analyte is a quantitative estimate.

J+ - The positive result reported for this analyte is a quantitative estimate, but may be biased high.

J- - The positive result reported for this analyte is a quantitative estimate, but may be biased low.

B - The compound/analyte was not detected substantially above the level of the associated method blank/preparation or field blank

U - This analyte was not detected in the sample. The numeric value represents the sample quantitation/detection limit.

UJ - This analyte was not detected in the sample. The actual quantitation/detection limit may be higher than reported.

NJ - This analyte has been "tentatively" identified. The numeric value represents its approximate concentration.

Y - This analyte coelutes with another target compound on the two chromatographic columns used for analysis.

R - The result for this analyte is unreliable. Additional data is needed to confirm or disprove the presence of this compound/analyte in the sample.

Data Validation Qualifier Code

J - The positive result reported for this analyte is a quantitative estimate.

J+ - The positive result reported for this analyte is a quantitative estimate, but may be biased high.

J- - The positive result reported for this analyte is a quantitative estimate, but may be biased low.

B - The compound/analyte was not detected substantially above the level of the associated method blank/preparation or field blank

U - This analyte was not detected in the sample. The numeric value represents the sample quantitation/detection limit.

UJ - This analyte was not detected in the sample. The actual quantitation/detection limit may be higher than reported.

NJ - This analyte has been "tentatively" identified. The numeric value represents its approximate concentration.

Y - This analyte coelutes with another target compound on the two chromatographic columns used for analysis.

R - The result for this analyte is unreliable. Additional data is needed to confirm or disprove the presence of this compound/analyte in the sample.

Data Validation Qualifier Code

J - The positive result reported for this analyte is a quantitative estimate.

J+ - The positive result reported for this analyte is a quantitative estimate, but may be biased high.

J- - The positive result reported for this analyte is a quantitative estimate, but may be biased low.

B - The compound/analyte was not detected substantially above the level of the associated method blank/preparation or field blank

U - This analyte was not detected in the sample. The numeric value represents the sample quantitation/detection limit.

UJ - This analyte was not detected in the sample. The actual quantitation/detection limit may be higher than reported.

NJ - This analyte has been "tentatively" identified. The numeric value represents its approximate concentration.

Y - This analyte coelutes with another target compound on the two chromatographic columns used for analysis.

R - The result for this analyte is unreliable. Additional data is needed to confirm or disprove the presence of this compound/analyte in the sample.

Data Validation Qualifier Code

J - The positive result reported for this analyte is a quantitative estimate.

J+ - The positive result reported for this analyte is a quantitative estimate, but may be biased high.

J- - The positive result reported for this analyte is a quantitative estimate, but may be biased low.

B - The compound/analyte was not detected substantially above the level of the associated method blank/preparation or field blank

U - This analyte was not detected in the sample. The numeric value represents the sample quantitation/detection limit.

UJ - This analyte was not detected in the sample. The actual quantitation/detection limit may be higher than reported.

NJ - This analyte has been "tentatively" identified. The numeric value represents its approximate concentration.

Y - This analyte coelutes with another target compound on the two chromatographic columns used for analysis.

R - The result for this analyte is unreliable. Additional data is needed to confirm or disprove the presence of this compound/analyte in the sample.

Table 2

Analytical Parameter Lists for Tin Mill Canal Sediment Sampling and Analysis Program

Modified Appendix IX Parameters COPI List

Volatiles (SW846-8260B)	Semivolatiles (SW846-8270)	PCBs (SW846-8082)
1,1,1,2-Tetrachloroethane	1,2,4-Trichlorobenzene	Aroclor 1016
1,1,1-Trichloroethane	1,2-Dichlorobenzene	Aroclor 1221
1,1,2,2-Tetrachloroethane	1,3-Dichlorobenzene	Aroclor 1232
1,1,2-Trichloroethane	1,4-Dichlorobenzene	Aroclor 1242
1,1-Dichloroethane	2,4,5-Trichlorophenol	Aroclor 1248
1,1-Dichloroethene	2,4,6-Trichlorophenol	Aroclor 1254
1,2-Dichloroethane	2,4-Dichlorophenol	Aroclor 1260
1,2-Dichloropropane	2,4-Dimethylphenol	RCRA metals (SW846-6010B) [except as noted]
2-Butanone (Methyl ethyl ketone)	2,4-Dinitrophenol	Antimony (Sb)
2-Hexanone	2,4-Dinitrotoluene	Arsenic (As)
4-Methyl-2-pentanone (MIBK)	2,6-Dinitrotoluene	Barium (Ba)
Acetone	2-Chloronaphthalene	Beryllium (Be)
Benzene	2-Chlorophenol	Cadmium (Cd)
Bromoform	2-Methylnaphthalene	Chromium (Cr)
Carbon disulfide	2-Methylphenol (o-cresol)	Hexavalent Chromium (3060A)
Carbon tetrachloride	2-Nitrophenol	Cobalt (Co)
Chlorobenzene	3,3'-Dichlorobenzidine	Copper (Cu)
Chloroethane	3,3'-Dimethylbenzidine	Lead (Pb)
Chloroform	3-Methylphenol	Mercury (Hg) (7470A/7471A)
cis-1,3-Dichloropropene	4 Methylphenol (p cresol)	Nickel (Ni)
Ethylbenzene	4,6-Dinitro-2-methylphenol	Selenium (Se)
Methylene chloride	4-Bromophenyl phenyl ether	Silver (Ag)
Tetrachloroethene	4-Chloro-3-methylphenol	Thallium (Tl)
Toluene	4-Chlorophenyl phenyl ether	Tin (Sn)
trans-1,2-Dichloroethene	4-Nitrophenol	Vanadium (V)
trans-1,3-Dichloropropene	Acenaphthene	Zinc (Zn)
Trichloroethene	Acenaphthylene	Other
Vinyl chloride	Anthracene	Cyanide (SW846-9014)
Xylenes (total)	Benzo(a)anthracene	
	Benz(a)pyrene	
	Benzo(b)fluoranthene	
	Benzo(ghi)perylene	
	Benzo(k)fluoranthene	
	Bis(2-chloroethoxy)methane	
	Bis(2-chloroethyl)ether	
	Bis(2-chloroisopropyl)ether	
	Bis(2-ethylhexyl)phthalate	
	Butyl benzyl phthalate	
	Dibenz(a,h)anthracene	
	Diethyl phthalate	
	Dimethyl phthalate	
	Di-n-butyl phthalate	
	Di-n-octyl phthalate	
	Fluoranthene	
	Fluorene	
	Hexachlorobenzene	
	Hexachlorobutadiene	
	Hexachlorocyclopentadiene	
	Hexachloroethane	
	Indeno(1,2,3-cd)pyrene	
	Isophorone	
	Naphthalene	
	Nitrobenzene	
	Pentachloroethane	
	Pentachlorophenol	
	Phenanthrene	
	Phenol	
	Pyrene	
	Pyridine
