Case No. 2011-0729-CE
(Closed Case No. 99-2595-CE)
Facility I.D. No. 13326
AEC Project No. 05-056

Dear Ms. Bull:

Advantage Environmental Consultants, LLC (AEC) has completed a Receptor Survey – Addendum for Royal Farms Store #96 located at 500 Mechanics Valley Road in North East, Cecil County, Maryland. This addendum was completed in response to a Maryland Department of the Environment (MDE) letter, dated June 29, 2011, requesting the addendum survey due to the detection of liquid phase hydrocarbons (LPH) in a monitoring well adjacent to an active underground storage tank system (UST). The initial Receptor Survey was completed by AEC and dated February 22, 2007 in response MDE's letter, dated January 25, 2007, regarding elevated methyl tert-butyl ether (MTBE) detected in groundwater samples collected in the area of the UST system (Case No. 99-2595-CE). A Site Vicinity Map and a Site Map are presented as Figures 1 and 2, respectively, in Attachment A.

AEC contacted the MDE Water Supply Program and the Cecil County Health Department requesting records of all non-test water wells within a half-mile radius of the site. Copies of the information requests are provided in Attachment B. As of this date a response has not been received from Cecil County. Upon receipt, AEC will forward information received to the MDE Oil Control Program.

Mr. Stephen Walker of MDE provided AEC with the results of a database search presented in a spreadsheet (Attachment C). The spreadsheet details 60 non-test wells and includes wells construction information such as total depth, casing depth, screened intervals, and current status. Mr. Walker also provided well completion reports for those wells which AEC had not received reports during the initial well search. AEC cross-

referenced information in the spreadsheet with information presented in the well completion reports and with tax map and parcel information obtained from the Maryland Department of Assessments and Taxation (MDAT) to determine addresses associated with each well record. Wells for which address information could be ascertained were plotted on a street map which depicts one-half mile, 1,000 foot, and 500 foot radii from the site. The Well Location Map is provided as Figure 3 in Attachment A. Well completion reports are provided in Attachment D. During the initial well search AEC field verified the existence of potable wells within the search radii. The Well Location Map also depicts the locations of wells which were field verified.

According to the United States Geological Survey (USGS) 7.5-Minute Series North East, MD Topographic Quadrangle, the Site elevation is approximately 70 feet above mean sea level (msl). Surface drainage at the Site is generally to the west towards Little North East Creek, a tributary of the North East Creek, located approximately 1,400 feet west of the Site at its closest point. The site area topography is illustrated on Figure 1 in Attachment A.

According to the Maryland Geological Survey's Geologic Map of Maryland (1968); the Site is located in the Atlantic Coastal Plain physiographic province, which is situated east of the fall line that separates the unconsolidated sediments of the Atlantic Coastal Plain province from the metamorphic units of the Piedmont. According to the map, the Site is underlain by Quaternary (Pleistocene to present) Lowland Deposits. This formation consists of irregularly distributed beds of sand, gravel, sandy clay, and clay. The sandy components are medium- to coarse-grained quartz sand with cobbles and boulders near the base. Most beds are lenticular and change rapidly in character over short distances. The finer grained materials consist of varicolored silts and clays and brown to dark gray lignitic silty clay. This formation lies unconformably on the Port Deposit Gneiss which is a moderately to strongly deformed intrusive complex composed of gneissic biotite quartz diorite, hornblende-biotite quartz diorite, and biotite granodiorite. These rocks are reportedly foliated and some strongly sheared. The Port Deposit Gneiss formation outcrops to the west of the Site along the North East Creek alignment.

A Groundwater Gradient Map for the August 3, 2011 gauging event is provided as Figure 5 in Attachment A. Groundwater flow is shown to be towards the southwest. There appears to be some slight groundwater mounding in the vicinity of MW-7 which may be associated with the sanitary sewer line and/or Site building foundation drainage influences. The hydraulic gradient (change in head per unit distance (dh/dl)) between MW-5 and MW-2 was 0.003 feet per foot during this monitoring event.

Several potable wells are located in the vicinity of the petroleum release area. These well locations are shown on Figure 4 in Attachment A. Also shown on this map and the table below are the well completion characteristics such as total depth and casing depth as described in the various MDE well completion reports. The well completion information for 487 Mechanics Valley Road was verbally relayed to AEC by the MDE. No permit or well completion information has been found for 513 Mechanics Valley

Road. Based on visual observation, water from the potable well at 505 Mechanics Valley Road also services the business at 513 Mechanics Valley Road via a garden hose between the two structures.

| Address | Well Depth (ft) | Casing Depth (ft) | Sand/Gravel Interval (ft) | Depth to Bedrock (ft) | Approximate Distance to Release Area (ft) |
|--------------------------|-----------------|-------------------|---------------------------|-----------------------|---|
| 463 Mechanic Valley Road | 400 | 60 | 10-30 | 53 | 740 |
| 475 Mechanic Valley Road | 400 | 64 | 30-45 | 60 | 570 |
| 487 Mechanic Valley Road | 25 | No data | No data | No data | 420 |
| 493 Mechanic Valley Road | 165 | 55 | 3-45 | 50 | 450 |
| 500 Mechanic Valley Road | 350 | 63 | 26-60 | 60 | 130 |
| 505 Mechanic Valley Road | 147 | 40 | 0-10 | 38 | 350 |
| 513 Mechanic Valley Road | No data | No data | No data | No data | No Data |
| 10 Montgomery Drive | 360 | 60 | 26-60 | 55 | 70 |

Based on the well construction information all but one of the wells (487 Mechanic Valley Road) uses the Port Deposit Gneiss as a water source. The 487 Mechanic Valley Road well is reportedly hand dug and draws water from the surficial material. As a result this well may be particularly susceptible to impact from the release. The remaining down gradient wells are also at risk for being impacted by the release. All but one of the wells (10 Montgomery Drive) are located downgradient of the release area. Regardless, due to the close proximity of the 10 Montgomery Drive well to the release area, this well is considered subject to possible impact from the release.

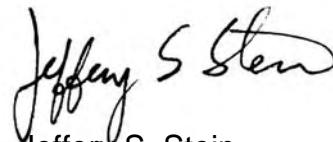

If you have any question regarding this information, or if we can be of further assistance, please contact AEC at (301) 766-0500.

Sincerely,

Subject: Well Survey 500 Mechanics Valley Road
Date: Wednesday, August 10, 2011 8:48:00 AM

Dear Ms. Scramlin:

AEC would like to request the well completion reports and a list of potable wells within a one-half mile radius of 500 Mechanics Valley Road, North East, Maryland. We are requesting this information to submit to the MDE Oil Control Program. We appreciate your timely response to this request as we are attempting to report to the MDE by August 25, 2011. AEC will pay any necessary copying charges related to this request. Please invoice me at the address below. Please email or call me with any questions.

Thank-you for your help.

Re: Public Information Act (PIA) Request - Sent Via Regular Mail and facsimile

Dear Ms. Donaldson:

Advantage Environmental Consultants, LLC (AEC), under the PIA, would like to review well completion reports for drinking water wells located within ½ mile of the following site:

**Royal Farms Store #96
500 Mechanics Valley Road
North East, Cecil County, MD
Facility ID No 13326**

In speaking with Mr. Steven Walker of the Water Management Administration, I understand that some of the MDE's well completion reports have been transferred off site in order to scan, and are not currently available. I would like to review all available well completion reports.

We appreciate your timely response to this request. AEC will pay for necessary copying charges related to the request. Please invoice us at the above address. Please call me at (301) 776-0500 if you have any questions. Thank you for your time.

Sincerely,
ADVANTAGE ENVIRONMENTAL CONSULTANTS, LLC.
