**Subject: Second Quarter 2014 – Quarterly Monitoring Report
Compliance Reporting Date: August 15, 2014
7-Eleven Store No. 32785
125 Hanover Pike
Hampstead, MD
Facility ID No. 11266
Case No. 2006-0282-CL**

Dear Mr. Richmond,

On behalf of 7-Eleven, Inc. (7-Eleven), AECOM has prepared the attached quarterly monitoring report for the above-referenced site. This report was prepared to meet the requirements set forth in the Consent Order between 7-Eleven and the Maryland Department of the Environment (MDE) dated March 21, 2011.

All ten on-site monitoring wells were sampled this period on June 9, 2014. The 7-Eleven on-site potable well was not sampled this period. The two tank field wells were gauged and were determined to be dry or had insufficient water for sampling.

The monitoring wells are gauged monthly and sampled quarterly; the tank field wells are gauged and sampled quarterly when sufficient water is present. The on-site potable well is sampled semi-annually as directed by the MDE. This site is located within the "High Risk Groundwater Use Area"; however, the sampling exceeds the frequency requirements set forth in MDE's Emergency Oil Pollution and Tank Management Regulations for sites located in a "High Risk Groundwater Use Area", effective January 26, 2005.

As directed by MDE, AECOM installed a point-of-entry-treatment (POET) system on the 124 Hanover Pike potable well on May 27, 2010; AECOM currently samples the system bimonthly. No volatile organic compounds (VOCs), including methyl-tert-butyl ether (MTBE), have been detected above laboratory detection limits in the final effluent. Six carbon changes had been conducted prior to this quarter the most recent of which was conducted on December 28, 2012.

AECOM will continue to conduct quarterly sampling of the monitoring and tank field wells. The next scheduled event is for September 2014. Based on historical observations and analytical data, AECOM requested a change to annual sampling for the 7-Eleven potable well, which was subsequently approved by MDE. The next sampling event for the 7-Eleven potable well is approximately March 2015.

During this monitoring period, AECOM maintained and operated the groundwater recovery system per the MDE approved Corrective Action Plan (CAP) with revisions. System startup occurred on October 8, 2013; monthly system performance reports were submitted to MDE in December 2013 and January and February 2014. Warranty repairs were conducted by SCE, under AECOM oversight on May 6, 2014.

Compliance Reporting Date – August 15, 2014

AECOM Contacts: John J. Canzeri, Project Manager
Marie Treiber, Regional Senior Project Manager

7-Eleven, Inc. Contact: Jose Rios, Manager Environmental Services

CURRENT SITE STATUS

- The site is an active 7-Eleven convenience store and retail gasoline station.
 - Currently, ten monitoring wells, two tank field wells, and four shallow injection wells are located on the site. The monitoring wells are gauged monthly and sampled quarterly; the tank field wells are gauged and sampled quarterly when sufficient water is present. The on-site potable well is sampled annually as directed by the MDE. The sampling exceeds the frequency requirements set forth in MDE's Emergency Oil Pollution and Tank Management Regulations for sites located in a "High Risk Groundwater Use Area". The shallow injection wells were used in an Enhanced Bio-Augmentation Pilot Test through November 2011.
 - The potable well and treatment system at 124 Hanover Pike is sampled bimonthly and monthly at the directive of MDE.
 - Per MDE-approved Corrective Action Plan (CAP) with revisions, AECOM began installation of the ex-situ groundwater extraction and treatment system at the site on August 19, 2013.
 - AECOM conducted the remediation system startup and shakedown on October 8, 2013.
-

PAST ACTIVITIES

- Two USTs (RUL #1 and PUL #2) and associated UST system were installed at the site in March 2000.
- On July 7, 8 and 11, 2005, AECOM installed three monitoring wells (MW-1 through MW-3) at the site to meet the requirements set forth in MDE's Emergency Oil Pollution and Tank Management Regulations, effective January 26, 2005. COMAR 26.10.02.03-4 requires installation of a minimum of three monitoring wells outside of the UST tank field for release detection and determination of groundwater flow direction at the site.

AECOM

- On September 15, 2005, AECOM submitted a Monitoring Well Installation and Observation Report to MDE. ENSR on behalf of 7-Eleven recommended the installation of two additional monitoring wells at the site based on the presence of elevated concentrations of MTBE in monitoring wells MW-1 and MW-3.
- On October 5, 2005, MDE issued a directive letter approving installation of two additional monitoring wells at the site. MDE requested a self-audit of the underground storage tank (UST) system. MDE also required completion of a receptor survey, including review of all well completion records within a ½-mile radius of the site. On November 18, 2005, 7-Eleven submitted to MDE the results of an UST system self audit conducted October 26, 2005.
- On November 21 and 22, 2005, AECOM installed two additional monitoring wells (MW-4 and MW-5) at the site.
- On January 26, 2005, AECOM submitted the results of the receptor survey to MDE.
- On August 25, 2006, MDE issued a directive letter requesting a Supplemental Work Plan, detailing a plan to define the extent of petroleum hydrocarbons in the soil and groundwater and to determine if there was any off-site migration of either liquid or dissolved-phase hydrocarbons. Further, the letter requested submittal of an Interim Corrective Action Plan (CAP), evaluating subsurface vapors in the vicinity of the active UST field, and determining the most efficient and effective means of reducing the vapors should they be present in the vicinity of the active UST field and on-site monitoring well MW-1.
- On October 13, 2006, AECOM submitted the Supplemental Work Plan and Interim CAP requested in MDE's August 25, 2006 directive letter. The Interim CAP included a discussion of potential remediation and mitigation of contamination at the site through soil vapor extraction (SVE), as requested by MDE, while the Supplemental Work Plan entailed the use of geoprobe direct push technology to install borings and collect soil and groundwater samples.
- On January 22, 2007, MDE issued an approval letter, indicating that they were in agreement with the proposed plans. Further, MDE requested several additional items, including an increase in frequency of groundwater sampling from a semi-annual schedule to a quarterly schedule for the on-site monitoring wells and tank field wells, with the on-site potable well to remain on the current semi-annual sampling schedule. All monitoring well and tank field well samples were to continue to be analyzed for full-suite VOCs via EPA Method 8260B (also including fuel oxygenates) and total petroleum hydrocarbons via EPA method 8015B (diesel and gasoline range organics). The potable samples were to continue to be analyzed for full-suite VOCs via EPA Method 524.2 (including fuel oxygenates).
- On February 20, 2007, AECOM submitted a request for modification to and/or postponement of MDE's increased scope requirements in light of the January 2007 sampling results, historical analytical data and the groundwater flow direction on site. Since sampling was initiated in July 2005, MTBE concentrations in the up-gradient well MW-1 steadily decreased from 31,000 µg/l to below laboratory detection limits in the January 2007 sampling event. Additionally, MTBE concentrations in all sampled wells were below the MDE guideline of 20 µg/l during the January 2007 event. ENSR proposed that current site monitoring be increased to quarterly (with the exception of the on-site potable well which would remain semi-annual), as recommended by MDE in their January 22, 2007 letter, and recommended delayed completion of a Site Investigation Work Plan and a Site Conceptual Model.
- On April 26, 2007, MDE issued a directive letter, temporarily delaying completion of a Site Investigation Work Plan and a Site Conceptual Model pending the results of the Interim CAP.
- On July 17, 2007, six off-site private supply wells were sampled at the request of MDE. The six

private supply wells were located in the immediate area of the 7-Eleven facility, including 114, 118, 123, 124, 130 and 135 Hanover Pike. MTBE was detected at concentrations of 0.6 micrograms-per-liter ($\mu\text{g/l}$), 2.9 $\mu\text{g/l}$, 44 $\mu\text{g/l}$ and 0.6 $\mu\text{g/l}$ at 114, 118, 124 and 135 Hanover Pike. MTBE was below laboratory detection limits at 123 and 130 Hanover Pike. All other VOCs, including BTEX, were non-detect (ND) in each of the private supply wells sampled.

- On July 30, 2007 a confirmation sample was collected from 124 Hanover Pike, per MDE directive. The analytical results indicated an MTBE concentration of 150 $\mu\text{g/l}$.
- On July 22, 2008, MDE issued a directive for a Corrective Action Plan (CAP). Based on discussions with the MDE the CAP was to be prepared after additional monitoring wells were installed and feasibility testing could be completed.
- A Delineation Work Plan for the installation of three additional monitoring wells was submitted to the MDE on August 15, 2008 and was approved October 7, 2008.
- On November 17-19, 2008, three monitoring wells (one shallow and two deep wells) were installed.
- On December 1 and 2, 2008, geophysical testing was performed on the two deep wells. This survey was conducted in order to better define the fracture orientation, evaluate water-bearing zones and evaluate remedial strategies.
- On March 23, 2009, AECOM reviewed MDE files related to the former Crown Station 142 (Case #2003-0376 CL) located at 201 Hanover Pike. Geologic and sampling data were reviewed for possible relationships to the project site.
- On March 27, 2009, AECOM submitted an Enhanced Bio-Augmentation Pilot Test Work Plan to MDE, including installation of four 2-inch injection wells, Inj-1 to Inj-4, in the vicinity of monitoring well MW-6.
- On August 7, 2009, MDE approved the Enhanced Bio-Augmentation Pilot Test Work Plan and requested sampling of 124 and 130 Hanover Pike potable wells (pre-, mid-, and post-monitoring period).
- On September 28 and 29, 2009, four 2" diameter injection wells (INJ-1 through INJ-4) were installed and developed in the area of MW-6, as proposed in the Enhanced Bio-Augmentation Pilot Test Work Plan.
- On October 22, 2009, conduits connecting the wells and to a future storage tank were installed, and the wells were completed with manholes. These wells and the piping system will be used to determine the feasibility of subsurface injection of bio-remediation products.
- On April 1, 2010, AECOM began bio-remediation injections as part of the Enhanced Bio-Augmentation Pilot Test; results are summarized in Bio-Augmentation Reports under separate cover.
- On May 27, 2010, per MDE, AECOM installed a carbon treatment system on the potable well located at 124 Hanover Pike.
- On June 1 through 3, 2010, AECOM installed two deep monitoring wells (MW-9 and MW-10). The wells were installed as part of the preparation of the Corrective Action Plan to help delineate the bedrock aquifer.
- On January 4, 2011, per discussions with MDE, AECOM installed an ISOC in well INJ-3, one of

the two injection wells (INJ-2 and INJ-3), to enhance the bioremediation activity at the site. An ISOC could not be placed into well INJ-2 due to frozen lines. In December 2010 through February 2011, bio-remediation injections were postponed due to freezing conditions.

- On March 21, 2011, MDE issued an Administrative Consent Order to 7-Eleven, detailing the regulatory-mandated activities and reporting schedules for the site.
- As directed by MDE in their June 7, 2011 correspondence, samples collected from the treatment system located at 124 Hanover Pike will be sampled for Nitrate and Nitrite via EPA method 353.3 and Orthophosphate via EPA method 365.2 in alternating months. Further, well MW-9 will be added to the monthly gauging and DO monitoring schedule effective immediately.
- On March 5, 2012, AECOM prepared and submitted a work plan to conduct a 48-hour continuous pump test from either monitoring well MW-8 or MW-9. It was approved by MDE on May 9, 2012. The approval letter indicated that no later than August 1, 2012, a comprehensive report explaining the results of the pumping test activities must be submitted, which also needed to include a revised schedule for the submittal/implementation of a CAP.
- On March 27, 2012, AECOM submitted a Notice of Intent (NOI) request for authorization to discharge treated groundwater under a general discharge permit, MDE approved this request on May 8, 2012.
- On May 14, 2012, AECOM, on behalf of 7-Eleven, submitted an application to the MD-SHA District 7 Office for a District Office (DO) permit to discharge groundwater treated on site into a stormwater retention pond located adjacent to the property. This request was approved in a directive letter dated August 9, 2012.
- On August 1, 2012, AECOM submitted a request for an extension of the submittal date for the Pumping Test Summary Report to September 3, 2012, which was subsequently approved by Jim Richmond of MD-SHA.
- As approved by MDE, the Maryland State Highway Administration (MD-SHA) District 7 Office, and as permitted by the District Office (DC), a 48-hour continuous pump test from monitoring well MW-10 was performed on October 26, 2012.
- On December 21, 2012, a Corrective Action Plan including the pump test results was submitted to MDE.
- On December 21, 2012, AECOM submitted the Corrective Action Plan Submitted to MDE.
- MDE approved the CAP in a letter dated February 20, 2013. AECOM was required to submit a contingency plan (within 45 days of the CAP Approval letter) which will outline the procedures under which operation of the groundwater remediation system will continue, in the event that site conditions change, which may require alternative methods of wastewater disposal.
- On May 1, 2013, AECOM submitted the contingency plan for approval.
- On October 8, 2013, AECOM performed the startup and shakedown of the groundwater remediation system.
- On May 6, 2014, SCE, under the oversight of AECOM, performed warranty repairs on the fittings associated with the equipment installed in well MW-9.

ACTIVITIES THIS PERIOD

Monitoring Period:	April through June 2014
Site Visit(s):	April 8, 14, 21, and; May 3, 6, 7, 8, 12, 15, 16, 20, 21, 23, and 27; and June 9 and 24, 2014
Field Activities:	Activities included monthly well gauging, quarterly well gauging and sampling of the monitoring and tank field wells, potable system sampling at 124 Hanover Pike, and ex-situ groundwater extraction system operation, maintenance and warranty repairs conducted by SCE.
Depth-to-Water:	On June 9, 2014, depth-to-water in wells not under pumping conditions ranged from 19.36 feet below ground surface (bgs) in well MW-3 to 25.15 feet bgs in wells MW-2 and MW-7. In the three pumping wells (MW-8, MW-9 and MW-10), depth-to-water ranged from 105.29 feet bgs in well MW-10 to 136.06 feet bgs in well MW-9. Groundwater elevation maps for the shallow wells are shown as Figure 1 and historical groundwater elevations are listed in Table 1 . Bedrock and shallow groundwater flow is historically toward the southeast; shallow groundwater flow was to the southeast. A groundwater elevation map was not created for the bedrock wells due to three of the wells working under pumping conditions.
Liquid-Phase Hydrocarbons:	No LPH has been observed at the site.
Number of Wells/ Wells Sampled:	<p>The ten on-site monitoring wells were sampled this period on June 9, 2014. The 7-Eleven potable well was not sampled this quarter. The two tank field wells could not be sampled because they were either dry or lacked sufficient water for sampling (Table 2, Figure 2 and Attachment A).</p> <p>Residential wells located at 114 and 118 Hanover Pike were sampled this period on June 24, 2014. Residential wells at 95 and 97 Phillips Drive were not vacant because there was no answer and no psi on the hose at 95 Phillips Drive, and 97 Phillips Drive remains vacant. Historical analytical results are provided in Table 3. Samples were collected from the POET system of the potable well servicing 124 Hanover Pike this period on May 3 and June 24, 2014. Historical analytical results are provided in Table 4.</p>

ANALYTICAL SUMMARY

Groundwater

Groundwater samples were collected on June 9, 2014 from the ten on-site monitoring wells. Groundwater samples from the wells were analyzed for total volatile organic compounds (VOCs) and

oxygenates, including BTEX, MTBE, tert-Butyl alcohol (TBA) and tert-Amyl methyl ether (TAME) by EPA Method 8260, and TPH-GRO via EPA Method 8015.

Analysis of groundwater samples collected from the ten monitoring wells did not reveal dissolved-phase concentrations above laboratory detection limits for benzene or BTEX.

A dissolved-phase MTBE concentration of 420 µg/l was reported in monitoring well MW-8 (pumping well), which is a decrease from the last quarterly sampling event (1,000 µg/l). A dissolved-phase MTBE concentration of 760 µg/l was reported in monitoring well MW-9, a decrease from 3,500 µg/l during the last reporting period. Monitoring well MW-8 had a dissolved-phase concentration of TPH-GRO of 350 µg/l, the lowest such value since March 2012. Well MW-9 had a dissolved-phased concentration of TPH-GRO of 660 µg/l, which represents a decrease from the last reporting period (3,800 µg/l). A TAME concentration of 21 µg/l was reported in well MW-9. All remaining analytes in the pumping wells reported concentrations below detection limits.

All analytes reported concentrations below detection limits in monitoring well MW-10, the second such occurrence since June 2011. This represents the second consecutive quarter in which MTBE was observed below detection limits since that time as well.

Monitoring well MW-1 reported a MTBE concentration of 1 µg/l. Monitoring well MW-2 observed a MTBE concentration of 11 µg/l, the lowest such value since February 2010. Monitoring well MW-5 reported a MTBE concentration of 3.4 µg/l during this monitoring period.

A dissolved-phase MTBE concentration of 720 µg/l was reported in monitoring well MW-6, which represents a decrease over each of the last two quarters. Monitoring well MW-6 had a dissolved-phase concentration of TPH-GRO of 720 µg/l, which also represents a decrease over each of the last two quarters. All remaining analytes reported concentrations below detection limits.

A dissolved-phase MTBE concentration of 2.5 µg/l was reported in monitoring well MW-7. All remaining analytes reported concentrations below detection limits.

No other VOCs were detected above laboratory detection limits in the monitoring wells. Summary and laboratory reports are included as **Figure 2**, **Table 2**, and **Attachment A**. MTBE concentration graphs-over-time are provided as **Attachment B**.

7-Eleven Potable Well

Annual sampling of the on-site potable well was not performed this quarter. Historical analytical data is summarized in **Table 2**.

Residential Treatment Potable Well

Samples were collected from the POET system of the potable well servicing 124 Hanover Pike this quarter, on May 3 and June 24, 2014. At the request of MDE, the POET system was sampled monthly during the system startup for the first 90 days. The samples were analyzed for total VOCs plus oxygenates via EPA Method 524.2. AECOM samples the system bimonthly (pre-, mid-, and post-injection), based on carbon breakthrough data. MTBE Concentrations in the influent sample have steadily decreased since September 9, 2012 through the end of this quarter. The June 24, 2014 sampling event reported the lowest MTBE concentration on record (0.54 µg/l). Six carbon changes have been conducted to date, including change-out of all three carbon units on July 20, 2010, February 8, 2011, June 28, 2011, February 21, 2012, June 26, 2012 and December 28, 2012, based on TBA breakthrough of the first carbon unit. No VOCs, including MTBE, have been detected above laboratory detection limits in the final effluent. Residential treatment and non-treatment potable well sampling results are included in **Table 3**, and **Attachment C**. A graph depicting influent MTBE concentrations in the potable well located at 124 Hanover Pike over time is provided as **Attachment D**.

Residential Non-Treatment Potable Wells

Annual sampling of two residential wells located at 114 and 118 Hanover Pike was conducted this quarter on June 24, 2014. Sampling of the residential wells at 95 and 97 Phillips Drive was not conducted this quarter. No residents were home at 95 Phillips Drive at the time of the sampling event, and 97 Phillips Drive residence remains vacant. No analytes reported concentrations above detection limits in any of the residential wells sampled. No other residential wells were sampled during this quarter. Residential potable well sampling results are included in **Table 4**.

REMEDIATION SYSTEM SUMMARY

AECOM began installation of the ex-situ groundwater extraction and treatment system at the site on August 19, 2013. System startup and shakedown took place on October 8, 2013 following extensive inspections and piping testing to ensure maximum efficiency and operability. Based on decreasing methyl tert-butyl ether (MTBE) trends and MDE approval, AECOM excluded monitoring well MW-6 from the system. Electric submersible pumps have been installed in monitoring wells MW-8, MW-9 and MW-10 at depths from the top-of-casing of 180 feet (ft), 185 ft, and 185 ft below ground surface (bgs), respectively.

All extracted groundwater is treated through an air stripper, two particulate filters, and two 500-pound granular activated carbon (GAC) units prior to discharge. The treated groundwater is discharged to the stormwater collection system on the vicinity of the 7-Eleven property. The treated groundwater is discharged in accordance with the requirements of the National Pollutant Discharge Elimination System (NPDES) General Permit and all necessary permits obtained from Carroll County. The air stripper system received an exemption from the requirements of the General Permit to Construct for Soil Vapor Extraction and Groundwater Air Stripping Equipment due to the concentrations remaining well below the de minimis standards.

In accordance with the MDE CAP Approval letter and Discharge Monitoring Reporting requirements dated February 20, 2013, AECOM samples the remediation system effluent twice monthly and completes twice monthly operation and maintenance (O&M) site visits, including gauging of the monitoring wells, to evaluate the operation of the remediation system and to complete any necessary system maintenance.

The remediation system was started on October 8, 2013. A total of 1,522,385 gallons of treated groundwater have been discharged through the end of this reporting period, 526,712 of which were discharged from the system during this reporting period (April through June 2014): 104,407 gallons were pumped from monitoring well MW-8 at an average rate of 0.85 gallons-per-minute (gpm); 22,867 gallons were pumped from monitoring well MW-9 at an average rate of 0.19 gpm; and 399,438 gallons were pumped from monitoring well MW-10 at an average rate of 3.26 gpm. System performance data is provided in **Table 5**.

Depth-to-water during this quarter in monitoring well MW-8 ranged from 109.34 feet bgs on April 21, 2014 to 132.62 feet bgs on June 9, 2014. Depth-to-water during this quarter in monitoring well MW-9 ranged from 53.60 feet bgs on April 21, 2014 (pump was inoperable) to 177.55 feet bgs on May 7, 2014. Depth-to-water during this quarter in monitoring well MW-10 83.65 feet bgs on May 7, 2014 to 134.77 feet bgs on April 21, 2014. Groundwater drawdown graphs of the pumping wells (MW-8, MW-9 and MW-10) are provided in **Attachment E**.

Groundwater Treatment System Analytical Summary

Air stripper influent and effluent samples were collected and submitted for laboratory analysis on April 8, May 7 and June 9, 2014 (also includes a GAC 1 influent and GAC 2 effluent sample). The April 8, 2014 sampling event revealed an air stripper influent MTBE concentration of 240 µg/l, while the remaining two sampling event air stripper influent samples reported MTBE concentrations of 180 µg/l. Tert-butanol (TBA) was only reported during the May 7, 2014 sampling event, when it was revealed to be 25 µg/l. During this quarter, the three sampling events revealed TPH-GRO concentrations of 170 µg/l, 260 µg/l and 180 µg/l, respectively. Tert-amyl methyl ether (TAME) has not been detected in the air stripper influent since it was first sampled on October 17, 2013, which it reported a concentration of 12 µg/l. All remaining analytes in the air stripper influent revealed concentrations below detection limits during all three sampling events this quarter. The air stripper effluent sample reported all analytes below detection limits during all three sampling events this quarter with the exception of MTBE during the April 8, 2014 sampling event, which revealed a concentration of 1.7 µg/l, representing an air stripper efficiency of more than 99%. The GAC 1 effluent sample from all three sampling events during this reporting period revealed all analytes below detection limits. A system final effluent (GAC 2) sample was collected on April 8 and 21, 2014, May 7 and 20, 2014, and June 9 and 24, 2014, the results of which revealed all analyte parameters below detection limits.

A summary of the analytical results are provided in **Table 6**. Laboratory reports are provided in **Attachment F**. Graphs depicting the air stripper MTBE and TPH-GRO concentrations over time is provided in **Attachment G**.

Summary

Based on historical analytical data and groundwater flow direction, dissolved-phase MTBE was initially concentrated in the area near the tank field (MW-1 and MW-6). MTBE concentrations in well MW-1 have dropped nearly two orders of magnitude since the well was sampled in July 2005. Decreases in MTBE were observed in wells MW-1, MW-2, and MW-6 through MW-9. Decreases in TPH-GRO concentrations were observed in wells MW-6, MW-8 and MW-9, with the remaining wells reporting TPH-GRO concentrations below detection limits. Dissolved-phase gasoline compounds in bedrock well MW-7 remain below laboratory detection limits with the exception of a MTBE concentration of 2.5 µg/l. MTBE was not detected in bedrock well MW-10 for the second consecutive quarter, representing the only two quarters with no detectable concentration since June 2011. Bedrock well MW-8 revealed a decrease in MTBE concentration this quarter with the lowest such value since June 2012 (420 µg/l) MTBE concentrations in bedrock well MW-9 also decreased since last quarter, dropping more than 78% from 3,500 µg/l to 760 µg/l during this reporting period. Following system warranty repairs in May 2014, the system appears to be operating with the most efficiency since startup in October 2013. Furthermore, MTBE influent concentrations in the potable well servicing 124 Hanover Pike dropped to the lowest such value on record during this reporting period (0.54 µg/l).

ACTIVITIES FOR THE THIRD QUARTER 2014

- July 2014 – Conduct bimonthly sampling of potable well at 124 Hanover Pike; complete carbon change of 124 Hanover Pike potable well treatment system as necessary; conduct monthly well gauging. Conduct system monitoring and monthly sampling regimen.
- August 2014 – Complete carbon change of 124 Hanover Pike potable well treatment system as necessary; monthly well gauging. Conduct system monitoring and monthly sampling regimen.
- September 2014 – Conduct bimonthly sampling of potable well at 124 Hanover Pike; conduct quarterly gauging and sampling of monitoring and tank field wells. Complete

AECOM

carbon change of 124 Hanover Pike potable well treatment system as necessary;
monthly well gauging. Conduct system monitoring and monthly sampling regimen.

Groundwater Remediation System Started on October 8, 2013
 Submersible pumps deployed into monitoring wells MW-8, MW-9 and MW-10
 NI - not installed
 NG - not gauged
 NA - Frozen access
 ** represents well is under pumping conditions

MDE CLEANUP STD		5	1,000	700	10,000	--	20	--	--	47	47

BTEX - Total Benzene, Toluene, Ethylbenzene and Xylenes
 MTBE - Methyl Tert-Butyl Ether
 TBA - Tert-Butyl Alcohol
 TAME - Tert-Amyl Methyl Ether
 µg/L - micrograms-per-liter
 Bold - indicates level above the MDE Cleanup Standard

ND@x - not detected above laboratory detection level of x
 ND - not detected
 NI - not installed
 NA - not analyzed
 NS - inaccessible
 E - estimated result, exceeds calibration range

MDE CLEANUP STD		5	1,000	700	10,000	--	20	--	--	47	--

BTEX - Total Benzene, Toluene, Ethylbenzene and Xylenes
MTBE - Methyl Tert-Butyl Ether
TBA - Tert-Butyl Alcohol
TAME - Tert-Amyl Methyl Ether
µg/L - micrograms-per-liter
ND@x - not detected above laboratory detection level of x

ND - not detected
NI - not installed
NA - not analyzed
NS - inaccessible
E - estimated result; exceeds calibration range
BOLD - indicates level above the MDE Cleanup Standard

Project Name: 7-11 Store 32785
Project Location: Hampstead, MD
Project ID.: 60144916

Dear John Canzeri :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **14061004**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on July 15, 2014. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

A handwritten signature in black ink that reads 'Dan Prucnal'. The signature is written in a cursive style with a horizontal line underneath it.

Dan Prucnal
Laboratory Manager

Sample Summary
Client Name: AECOM
Project Name: 7-11 Store 32785

Work Order Number(s): 14061004

Project ID: 60144916

The following samples were received under chain of custody by Phase Separation Science (PSS) on 06/10/2014 at 12:00 pm

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
14061004-001	MW 1	GROUND WATER	06/09/14 14:15
14061004-002	MW 2	GROUND WATER	06/09/14 15:30
14061004-003	MW 3	GROUND WATER	06/09/14 15:15
14061004-004	MW 4	GROUND WATER	06/09/14 14:50
14061004-005	MW 5	GROUND WATER	06/09/14 14:00
14061004-006	MW 6	GROUND WATER	06/09/14 16:12
14061004-007	MW 7	GROUND WATER	06/09/14 13:30
14061004-008	MW 8	GROUND WATER	06/09/14 17:10
14061004-009	MW 9	GROUND WATER	06/09/14 17:20
14061004-010	MW 10	GROUND WATER	06/09/14 17:30

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the LOD.
- LOD Limit of Detection. An estimate of the minimum amount of a substance that an analytical process can reliably detect.
An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: AECOM

Project Name: 7-11 Store 32785

Work Order Number(s): 14061004

Project ID: 60144916

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

Sample Receipt Checklist

Work Order #	14061004	Received By	Jacob Prucnal
Client Name	AECOM	Date Received	06/10/2014 12:00:00 PM
Project Name	7-11 Store 32785	Delivered By	Client
Project Number	60144916	Tracking No	Not Applicable
Disposal Date	07/15/2014	Logged In By	Jacob Prucnal

Shipping Container(s)

No. of Coolers 1

		Ice	Present
Custody Seal(s) Intact?	N/A	Temp (deg C)	5
Seal(s) Signed / Dated?	N/A	Temp Blank Present	No

Documentation

COC agrees with sample labels?	Yes	Sampler Name	<u>Nick Barrett</u>
Chain of Custody	Yes	MD DW Cert. No.	<u>N/A</u>

Sample Container

Appropriate for Specified Analysis?	Yes	Custody Seal(s) Intact?	Not Applicable
Intact?	Yes	Seal(s) Signed / Dated	Not Applicable
Labeled and Labels Legible?	Yes		

Total No. of Samples Received 10

Total No. of Containers Received 60

Preservation

Metals	(pH<2)	N/A
Cyanides	(pH>12)	N/A
Sulfide	(pH>9)	N/A
TOC, COD, Phenols	(pH<2)	N/A
TOX, TKN, NH3, Total Phos	(pH<2)	N/A
VOC, BTEX (VOA Vials Rcvd Preserved)	(pH<2)	Yes
Do VOA vials have zero headspace?		Yes
624 VOC (Rcvd at least one unpreserved VOA vial)		N/A

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.

Project Name: 7-11 Store 32785
Project Location: Hampstead, MD
Project ID.: 60144916

Dear John Canzeri :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **14062510**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on July 30, 2014. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

A handwritten signature in black ink that reads 'Dan Prucnal'. The signature is fluid and cursive.

Dan Prucnal
Laboratory Manager

Sample Summary
Client Name: AECOM
Project Name: 7-11 Store 32785

Work Order Number(s): 14062510

Project ID: 60144916

The following samples were received under chain of custody by Phase Separation Science (PSS) on 06/25/2014 at 10:30 am

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
14062510-001	118 Hanover	GROUND WATER	06/24/14 16:20

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the LOD.
- LOD Limit of Detection. An estimate of the minimum amount of a substance that an analytical process can reliably detect.
An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: AECOM

Project Name: 7-11 Store 32785

Work Order Number(s): 14062510

Project ID: 60144916

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

Documentation

COC agrees with sample labels? Yes

Chain of Custody Yes

Sampler Name Mike Parsons

MD DW Cert. No. N/A

Sample Container

Appropriate for Specified Analysis? Yes

Intact? Yes

Labeled and Labels Legible? Yes

Custody Seal(s) Intact? Not Applicable

Seal(s) Signed / Dated Not Applicable

Total No. of Samples Received 1

Total No. of Containers Received 3

Preservation

Metals (pH<2) N/A

Cyanides (pH>12) N/A

Sulfide (pH>9) N/A

TOC, COD, Phenols (pH<2) N/A

TOX, TKN, NH3, Total Phos (pH<2) N/A

VOC, BTEX (VOA Vials Rcvd Preserved) (pH<2) Yes

Do VOA vials have zero headspace? Yes

624 VOC (Rcvd at least one unpreserved VOA vial) N/A

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.

Project Name: 7-11 Store 32785
Project Location: Hampstead MD
Project ID.: 60144916

Dear John Canzeri :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **14062511**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on July 30, 2014. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

A handwritten signature in black ink that reads 'Dan Prucnal'.

Dan Prucnal
Laboratory Manager

Sample Summary
Client Name: AECOM
Project Name: 7-11 Store 32785

Work Order Number(s): 14062511

Project ID: 60144916

The following samples were received under chain of custody by Phase Separation Science (PSS) on 06/25/2014 at 10:30 am

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
14062511-001	114 Hanover	GROUND WATER	06/24/14 12:22

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the LOD.
- LOD Limit of Detection. An estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: AECOM

Project Name: 7-11 Store 32785

Work Order Number(s): 14062511

Project ID: 60144916

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

VOC, BTEX (VOA Vials Rcvd Preserved) (pH<2) Yes

Do VOA vials have zero headspace? Yes

624 VOC (Rcvd at least one unpreserved VOA vial) N/A

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.

Reference: PSS Work Order(s) No: **14050501**
Project Name: 7-11 Store 32785
Project Location: Hampstead, MD
Project ID.: 60144916

Dear John Canzeri :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **14050501**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on June 9, 2014. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

A handwritten signature in black ink that reads 'Dan Prucnal'.

Dan Prucnal
Laboratory Manager

Sample Summary
Client Name: AECOM
Project Name: 7-11 Store 32785

Work Order Number(s): 14050501

Project ID: 60144916

The following samples were received under chain of custody by Phase Separation Science (PSS) on 05/05/2014 at 08:25 am

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
14050501-001	124 Hanover INF	GROUND WATER	05/03/14 09:34
14050501-002	124 Hanover GAC1	GROUND WATER	05/03/14 09:31
14050501-003	124 Hanover GAC2	GROUND WATER	05/03/14 09:28
14050501-004	124 Hanover FINAL	GROUND WATER	05/03/14 09:25

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the LOD.
- LOD Limit of Detection. An estimate of the minimum amount of a substance that an analytical process can reliably detect.
An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: AECOM

Project Name: 7-11 Store 32785

Work Order Number(s): 14050501

Project ID: 60144916

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

Analytical Data Package Information Summary

Do VOA vials have zero headspace? Yes

624 VOC (Rcvd at least one unpreserved VOA vial) N/A

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.

Project Name: 7-11 Store 32785
Project Location: Hampstead, MD
Project ID.: 60144916

Dear John Canzeri :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **14062509**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on July 30, 2014. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

A handwritten signature in black ink that reads 'Dan Prucnal'.

Dan Prucnal
Laboratory Manager

Sample Summary
Client Name: AECOM
Project Name: 7-11 Store 32785

Work Order Number(s): 14062509

Project ID: 60144916

The following samples were received under chain of custody by Phase Separation Science (PSS) on 06/25/2014 at 10:30 am

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
14062509-001	124 Hanover INF	GROUND WATER	06/24/14 12:03
14062509-002	124 Hanover GAC1	GROUND WATER	06/24/14 11:59
14062509-003	124 Hanover GAC2	GROUND WATER	06/24/14 11:56
14062509-004	124 Hanover FINAL EFF	GROUND WATER	06/24/14 11:53

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the LOD.
- LOD Limit of Detection. An estimate of the minimum amount of a substance that an analytical process can reliably detect.
An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: AECOM

Project Name: 7-11 Store 32785

Work Order Number(s): 14062509

Project ID: 60144916

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

Analytical Data Package Information Summary

Work Order(s): 14062509

TOC, COD, Phenols	(pH<2)	N/A
TOX, TKN, NH3, Total Phos	(pH<2)	N/A
VOC, BTEX (VOA Vials Rcvd Preserved)	(pH<2)	Yes
Do VOA vials have zero headspace?		Yes
624 VOC (Rcvd at least one unpreserved VOA vial)		N/A

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.

Project Location: Hampstead, MD
Project ID.: 60144916

Dear John Canzeri :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **14040905**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on May 14, 2014. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

Dan Prucnal
Laboratory Manager

Sample Summary
Client Name: AECOM
Project Name: 7-11 Store 32785

Work Order Number(s): 14040905

Project ID: 60144916

The following samples were received under chain of custody by Phase Separation Science (PSS) on 04/09/2014 at 09:12 am

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
14040905-001	A/S INF	GROUND WATER	04/08/14 07:43
14040905-002	A/S EFF	GROUND WATER	04/08/14 07:40
14040905-003	GAC-1 EFF	GROUND WATER	04/08/14 07:32

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the LOD.
- LOD Limit of Detection. An estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: AECOM

Project Name: 7-11 Store 32785

Work Order Number(s): 14040905

Project ID: 60144916

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.

Project Location: Hampstead, MD
Project ID.: 60144916

Dear John Canzeri :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **14040904**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on May 14, 2014. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

A handwritten signature in black ink that reads 'Dan Prucnal'. The signature is fluid and cursive.

Dan Prucnal
Laboratory Manager

Sample Summary
Client Name: AECOM
Project Name: 7-11 Store 32785

Work Order Number(s): 14040904

Project ID: 60144916

The following samples were received under chain of custody by Phase Separation Science (PSS) on 04/09/2014 at 09:12 am

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
14040904-001	GAC-2 FINAL	GROUND WATER	04/08/14 07:26

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the LOD.
- LOD Limit of Detection. An estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: AECOM

Project Name: 7-11 Store 32785

Work Order Number(s): 14040904

Project ID: 60144916

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.

Reference: PSS Work Order(s) No: **14042203**
Project Name: 7-11 Store 32785
Project Location: Hampstead, MD
Project ID.: 60144916

Dear John Canzeri :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **14042203**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on May 27, 2014. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

A handwritten signature in black ink that reads 'Dan Prucnal'. The signature is written in a cursive, flowing style.

Dan Prucnal
Laboratory Manager

Sample Summary
Client Name: AECOM
Project Name: 7-11 Store 32785

Work Order Number(s): 14042203

Project ID: 60144916

The following samples were received under chain of custody by Phase Separation Science (PSS) on 04/22/2014 at 08:05 am

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
14042203-001	GAC-2 FINAL	GROUND WATER	04/21/14 16:40

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the LOD.
- LOD Limit of Detection. An estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: AECOM

Project Name: 7-11 Store 32785

Work Order Number(s): 14042203

Project ID: 60144916

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

Sample Receipt Checklist

Work Order #	14042203	Received By	Amy Friedlander
Client Name	AECOM	Date Received	04/22/2014 08:05:00 AM
Project Name	7-11 Store 32785	Delivered By	Client
Project Number	60144916	Tracking No	Not Applicable
Disposal Date	05/27/2014	Logged In By	Robyn Rhudy

Shipping Container(s)

No. of Coolers 1

Custody Seal(s) Intact? N/A

Seal(s) Signed / Dated? N/A

Ice Present

Temp (deg C) 1

Temp Blank Present No

Documentation

COC agrees with sample labels? Yes

Chain of Custody Yes

Sampler Name Mike Parsons

MD DW Cert. No. N/A

Sample Container

Appropriate for Specified Analysis? Yes

Intact? Yes

Labeled and Labels Legible? Yes

Custody Seal(s) Intact? Not Applicable

Seal(s) Signed / Dated Not Applicable

Total No. of Samples Received 1

Total No. of Containers Received 6

Preservation

Metals (pH<2) N/A

Cyanides (pH>12) N/A

Sulfide (pH>9) N/A

TOC, COD, Phenols (pH<2) N/A

TOX, TKN, NH3, Total Phos (pH<2) N/A

VOC, BTEX (VOA Vials Rcvd Preserved) (pH<2) Yes

Do VOA vials have zero headspace? Yes

624 VOC (Rcvd at least one unpreserved VOA vial) N/A

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.

Reference: PSS Work Order(s) No: **14050905**
Project Name: 7-11 Store 32785
Project Location: Hampstead, MD
Project ID.: 60144916

Dear John Canzeri :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **14050905**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on June 13, 2014. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

A handwritten signature in black ink that reads 'Dan Prucnal'. The signature is fluid and cursive.

Laboratory Manager

Sample Summary
Client Name: AECOM
Project Name: 7-11 Store 32785

Work Order Number(s): 14050905

Project ID: 60144916

The following samples were received under chain of custody by Phase Separation Science (PSS) on 05/09/2014 at 11:11 am

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
14050905-001	A/S INF	GROUND WATER	05/07/14 10:25
14050905-002	A/S EFF	GROUND WATER	05/07/14 10:21
14050905-003	GAC-1 EFF	GROUND WATER	05/07/14 10:17

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the LOD.
- LOD Limit of Detection. An estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: AECOM

Project Name: 7-11 Store 32785

Work Order Number(s): 14050905

Project ID: 60144916

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.

Project Name: 7-11 Hampstead #32785
Project Location: Hampstead, MD
Project ID.: 60144916

Dear John Canzeri :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **14052202**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on June 26, 2014. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

A handwritten signature in black ink that reads 'Dan Prucnal'.

Dan Prucnal
Laboratory Manager

Sample Summary
Client Name: AECOM
Project Name: 7-11 Hampstead #32785

Work Order Number(s): 14052202

Project ID: 60144916

The following samples were received under chain of custody by Phase Separation Science (PSS) on 05/22/2014 at 09:39 am

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
14052202-001	GAC-2 Final	GROUND WATER	05/20/14 16:00

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the LOD.
- LOD Limit of Detection. An estimate of the minimum amount of a substance that an analytical process can reliably detect.
An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: AECOM

Project Name: 7-11 Hampstead #32785

Work Order Number(s): 14052202

Project ID: 60144916

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.

Project Name: 7-11 Store 32785
Project Location: Hampstead, MD
Project ID.: 60144916

Dear John Canzeri :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **14050906**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on June 13, 2014. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

A handwritten signature in black ink that reads 'Dan Prucnal'. The signature is written in a cursive, flowing style.

Dan Prucnal
Laboratory Manager

Sample Summary
Client Name: AECOM
Project Name: 7-11 Store 32785

Work Order Number(s): 14050906

Project ID: 60144916

The following samples were received under chain of custody by Phase Separation Science (PSS) on 05/09/2014 at 11:11 am

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
14050906-001	GAC-2 FINAL	GROUND WATER	05/07/14 10:11

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the LOD.
- LOD Limit of Detection. An estimate of the minimum amount of a substance that an analytical process can reliably detect.
An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: AECOM

Project Name: 7-11 Store 32785

Work Order Number(s): 14050906

Project ID: 60144916

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.

Project Name: 7-11 Store 32785
Project Location: Hampstead
Project ID.: 60144916

Dear John Canzeri :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **14061005**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on July 15, 2014. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

A handwritten signature in black ink that reads 'Dan Prucnal'.

Dan Prucnal
Laboratory Manager

Sample Summary
Client Name: AECOM
Project Name: 7-11 Store 32785

Work Order Number(s): 14061005

Project ID: 60144916

The following samples were received under chain of custody by Phase Separation Science (PSS) on 06/10/2014 at 12:00 pm

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
14061005-001	A/S INF	GROUND WATER	06/09/14 17:00
14061005-002	A/S EFF	GROUND WATER	06/09/14 16:50
14061005-003	GAC-1 Eff	GROUND WATER	06/09/14 16:40

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the LOD.
- LOD Limit of Detection. An estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.

Case Narrative Summary

Client Name: AECOM

Project Name: 7-11 Store 32785

Work Order Number(s): 14061005

Project ID: 60144916

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

Total No. of Containers Received 18

Preservation

Metals (pH<2) N/A

Cyanides (pH>12) N/A

Sulfide (pH>9) N/A

TOC, COD, Phenols (pH<2) N/A

TOX, TKN, NH3, Total Phos (pH<2) N/A

VOC, BTEX (VOA Vials Rcvd Preserved) (pH<2) Yes

Do VOA vials have zero headspace? Yes

624 VOC (Rcvd at least one unpreserved VOA vial) N/A

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.

Project ID.: 60144916

Dear John Canzeri :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **14062508**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on July 30, 2014. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

A handwritten signature in black ink that reads 'Dan Prucnal'.

Dan Prucnal
Laboratory Manager

Sample Summary
Client Name: AECOM
Project Name: 7-11 Store 32785

Work Order Number(s): 14062508

Project ID: 60144916

The following samples were received under chain of custody by Phase Separation Science (PSS) on 06/25/2014 at 10:30 am

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
14062508-001	GAC2 Final	GROUND WATER	06/24/14 09:40

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the LOD.
- LOD Limit of Detection. An estimate of the minimum amount of a substance that an analytical process can reliably detect.
An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: AECOM

Project Name: 7-11 Store 32785

Work Order Number(s): 14062508

Project ID: 60144916

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.

Project Location: Hampstead, MD
Project ID.: 60144916

Dear John Canzeri :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **14061006**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on July 15, 2014. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

A handwritten signature in black ink that reads 'Dan Prucnal'.

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
14061006-001	GAC-2 Final	GROUND WATER	06/09/14 16:30

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the LOD.
- LOD Limit of Detection. An estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: AECOM

Project Name: 7-11 Store 32785

Work Order Number(s): 14061006

Project ID: 60144916

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

Sample Receipt Checklist

Work Order #	14061006	Received By	Jacob Prucnal
Client Name	AECOM	Date Received	06/10/2014 12:00:00 PM
Project Name	7-11 Store 32785	Delivered By	Client
Project Number	60144916	Tracking No	Not Applicable
Disposal Date	07/15/2014	Logged In By	Jacob Prucnal

Shipping Container(s)

No. of Coolers 1

		Ice	Present
Custody Seal(s) Intact?	N/A	Temp (deg C)	5
Seal(s) Signed / Dated?	N/A	Temp Blank Present	No

Documentation

COC agrees with sample labels?	Yes	Sampler Name	<u>Nick Barrett</u>
Chain of Custody	Yes	MD DW Cert. No.	<u>N/A</u>

Sample Container

Appropriate for Specified Analysis?	Yes	Custody Seal(s) Intact?	Not Applicable
Intact?	Yes	Seal(s) Signed / Dated	Not Applicable
Labeled and Labels Legible?	Yes		

Total No. of Samples Received 1

Total No. of Containers Received 6

Preservation

Metals	(pH<2)	N/A
Cyanides	(pH>12)	N/A
Sulfide	(pH>9)	N/A
TOC, COD, Phenols	(pH<2)	N/A
TOX, TKN, NH3, Total Phos	(pH<2)	N/A
VOC, BTEX (VOA Vials Rcvd Preserved)	(pH<2)	Yes
Do VOA vials have zero headspace?		Yes
624 VOC (Rcvd at least one unpreserved VOA vial)		N/A

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.
