**REPORTING PERIOD:** April 1, 2016 – June 30, 2016  
**AGENCY CONTACT:** Mr. Forest Arnold  
**MOTIVA CONTACT:** Mr. Robert Rule, (832) 337-7397  
**SOVEREIGN CONTACT:** Mrs. Natalie Percello, (202) 506-7386

## I. SITE DESCRIPTION

### A. Site Use

The Site is a Former Shell Service Station, currently a Citgo station. For the purposes of this report, “onsite” refers to the service station property, and “offsite” refers to all properties down-gradient of the service station.

### B. Surrounding Area

The Site is located in a mixed commercial and residential area (**Figures 1 and 2**).

### C. Lithology

The overburden sequence, which is formed as rolling upland and steep sided strike valleys, is rarely more than 100 feet thick. In the immediate Site area, the overburden is 60-70 feet (ft) thick. The overburden consists of primarily micaceous saprolite and is floored by a weathered schist bounding the competent bedrock zone. Monitoring wells in the weathered schist are screened approximately 63-80 ft. below ground surface (bgs; deep wells [D]), while wells screened in the bedrock aquifer are located in the range of 70-100 ft. bgs (rock wells [R]). The bedrock geology in the area of the Site is primarily composed of metapelitic schist containing mica, quartz and garnet. The overburden (saprolite) mineralogy likely consists of oxides and clay-species pseudomorphs of the original schist which have been altered during in-situ chemical weathering from both historic and current groundwater interactions. Relict foliation, evident in the saprolitic overburden, has been noted as horizontal to sub-horizontal.

### D. Sensitive Receptors

Basements / Underground Receptors: There are single-family homes, many with basements, northwest of the Site on Bryants Nursery Road.

Surface Water / Wetlands: The surface water bodies in the vicinity of the Site include two State Highway Administration (SHA) Stormwater Retention Ponds, owned by the Maryland Department of Transportation (approximately 400 feet west-southwest and approximately 800 feet north-northeast, respectively), an unnamed pond (approximately 880 feet west-southwest), Bryants Nursery Run (approximately 1,200 feet west), and an intermittent stream (approximately 600 feet northwest). There are no wetlands immediately downgradient of the Site.

Potable Wells: Potable wells are in use within 2,500 feet of the station on New Hampshire Avenue and Bryants Nursery Road. A public water main (WSSC) has been installed on Bryants Nursery Road extending to houses 710 and 711. At the time of this report, all homes which can be connected are connected to this water main. All potable carbon treatment units have been removed at this time.

## II. SITE HISTORY

The following lists historical events related to the remedial investigation of the Site:

- In September 2002, the Shell Station was closed for business.
- In November 2002, underground storage tank (UST) and line removal activities took place. Three 10,000-gallon gasoline USTs, three hydraulic lifts, one 1,000-gallon heating oil UST, and one 1,000-gallon used oil UST were removed from the ground.
- In February 2003, a Work Plan and Tank Removal Report was submitted to the Maryland Department of the Environment (MDE) and recommended the installation of four monitoring wells onsite.
- In August 2003, MDE gave verbal direction to Motiva to sample the area’s potable wells.
- In September 2003, the first round of potable well sampling was initiated. Samples were collected from 15526 and 15529 New Hampshire Avenue.
- In October 2003, the second round of potable well sampling was initiated. Samples were collected from 17 potable wells on Bryants Nursery Road (611, 621, 650, 651, 660, 661, 670, 700, 710, 711, 720, 721, 730, 731, 740, 741, and 751) located adjacent from the station across New Hampshire Avenue and one potable well on Snider Lane (715),

located northeast of the station.

- In November 2003, Point of Entry Treatment (POET) filtration systems were installed on potable wells of three (3) homes on Bryants Nursery Road (720, 730, and 731).
- From December 2003 to January 2004, monitoring wells MW-01 through MW-06 were installed.
- In February 2004, monitoring wells MW-05S, MW-06S, MW-06D, MW-07S, MW-08S, MW-08D, and MW-09S were installed.
- In March 2004, monitoring wells MW-05D, MW-07D, MW-09D, and MW-10 were installed.
- In March 2004, a soil vapor extraction (SVE) test was conducted onsite.
- In April 2004, monitoring wells MW-11S and MW-11D were installed.
- In June 2004, bedrock wells MW-05R, MW-06R, and MW-11R were installed, including rock coring, packer & geophysical testing.
- In June 2004, a groundwater pump and treat system was installed onsite. The system was connected to monitoring wells MW-01, MW-03, and MW-10 and consisted of two 2,000-lb liquid phase granular activated carbon (LGAC) units prior to discharge.
- In July 2004, the onsite groundwater pump and treat system was started.
- In August 2004, pump tests were completed to determine the radius of influence of monitoring wells MW-05D and MW-06D.
- In September 2004, an SVE pilot test was performed on monitoring wells MW-01, MW-03, and MW-10.
- In March 2005, the onsite SVE system was started.
- In July 2005, three nested wells were installed (750 BNR, 750 BND, and 750 BNS) at 750 Bryants Nursery Rd.
- In September 2005, MDE approved the proposed extension of the groundwater pump and treat system across New Hampshire Avenue to monitoring wells MW-05S, MW-11S, MW-06D, and MW-08D, if further remediation was needed.
- In December 2005, Road Opening Permit was approved by Montgomery County to conduct horizontal drilling under New Hampshire Avenue and extend remediation system piping to monitoring wells MW-05S, MW-11S, MW-06D, and MW-08D located across New Hampshire Avenue.
- In August 2006, the environmental management was transferred from EnviroTrac to Groundwater Environmental Services (GES). MDE sent an update letter regarding the Site to the Cloverly Civic Association.
- In March 2007, MDE sent a letter to the resident at 660 Bryants Nursery Road indicating that Shell would be sampling their potable well on a monthly basis for a period of one year and indicating that hydrofracturing during the installation of their new potable well might have contributed to the initial detections of petroleum constituents in their new well.
- In March 2007, MDE issued a letter indicating that the remediation shed with SVE system must be upgraded by March 30, 2007.
- In May 2007, a Subsurface Investigation Work Plan was prepared recommending that deep and bedrock groundwater monitoring points be installed in the vicinity of the former potable well at 730 Bryants Nursery Road. A Pilot Test Work Plan to address the offsite impacts in the deep groundwater aquifer was submitted. The Work Plan recommended using vacuum enhanced groundwater extraction (VEGE) technology to complete a Pilot Test using existing monitoring well MW-06D and a new well to be installed in the vicinity of monitoring wells MW-06D and MW-06R. The plans were approved by MDE with no modifications.
- In June 2007, monitoring well MW-12 was installed in the vicinity of monitoring wells MW-06S, MW-06D, and MW-06R to conduct pilot testing activities.
- In June 2007, pilot testing activities of the deep offsite aquifer were conducted as proposed in the May 2007 Pilot Test Work Plan.
- In August 2007, a SVE system shut-down request was submitted to MDE and approved.
- In September 2007, the SVE system was shut-down.
- In May 2008, MDE issued a directive with deadlines for several project milestones. The following milestones were included: (1) prepare a Corrective Action Plan (CAP) Addendum including pilot test results and preliminary offsite system design; (2) complete additional pump testing; (3) complete a Pilot Test Report/Extent of System Capture and Final Offsite System Design Report; and (4) provide an estimated offsite system start-up date.
- In September 2008, GES submitted a Subsurface Investigation Work Plan of Wooded Property (Goblin Property, located on Bryants Nursery Road across from the Site). The Work Plan proposed the installation of two sets of temporary deep and shallow 2-inch monitoring well clusters (4 wells total) to determine if the groundwater flowing beneath the Property was impacted by the operation of the Former Shell Station.
- In October 2008, MDE approved the Subsurface Investigation Work Plan of Wooded Property with the following

modifications: (1) an additional cluster of monitoring wells must be installed on the Property; and (2) the monitoring wells must be installed as permanent wells.

- From October to November 2008, monitoring wells MW-13S, MW-13D, MW-14S, MW-14D, MW-15S, and MW-15D were installed in the Wooded Property on Bryants Nursery Road.
- In December 2008, GES submitted a Wooded Lot Site Assessment Report to MDE containing a recommendation for additional delineation by installing two additional monitoring well clusters on the Property.
- In January 2009, MDE approved the recommendation to install two additional well clusters on the Wooded Property with no modifications. MDE noted that the monitoring wells on the Wooded lot should be sampled quarterly.
- In March 2009, monitoring wells MW-16S, MW-16D, MW-17S, and MW-17D were installed in the wooded lot on Bryants Nursery Road and monitoring well MW-18 was installed in front of the 15600 New Hampshire Avenue Property (Church Property).
- In March 2009, MDE sent a Site Status Letter to the Wooded Property owner, P. Golkin, to inform him of the history of the Site.
- In July 2009, a Revised Pump Test Work Plan was submitted to MDE. The Work Plan proposed the completion of a short term weathered rock zone pumping test and a longer term overburden pumping test in the area of the proposed remediation system (Bryants Nursery Road on the Church Property across from the Wooded lot) to evaluate aquifer parameters and vertical and horizontal flow in this area.
- In August 2009, MDE approved the Revised Pump Test Work Plan with modifications to the groundwater sampling analyses and the requirement that a CAP Addendum must be submitted within 60 days of the completion of the pump test.
- In August 2009, a pump test was conducted as outlined in the Revised Pump Test Work Plan.
- In November 2009, a CAP Addendum Work Plan was submitted to MDE. The corrective action proposed within the CAP Addendum was the installation of an Offsite Groundwater Recovery System on the church Property and the installation of an offsite recovery well network that would spatially cover the width of the delineated plume and address the shallow and deep overburden zones.
- In March 2010, MDE approved the CAP Addendum Work Plan with the following modifications: (1) submittal of a detailed implementation plan; and (2) one additional recovery well to be installed on the Wooded Property, two additional monitoring well clusters to be installed on the Wooded Property, and two additional monitoring well clusters to be installed further down Bryants Nursery Road beyond the proposed recovery wells.
- From June 2010 to July 2010, monitoring wells 730 BNS, 730 BND, and recovery well RW-22 were installed.
- In September 2010, MDE approved the CAP Implementation Plan with no modifications.
- In September 2010, construction activities for the Offsite Groundwater Recovery System being installed on the wooded area of the Church Property began.
- In September 2010, recovery well RW-19 was installed.
- From October 2010 to November 2010, recovery wells RW-20, RW-21, and RW-23 were installed. All recovery wells (RW-19 through RW-23) were connected to the offsite system. Monitoring well clusters MW-24S, MW-24D, MW-25S, MW-25D, MW-26S, and MW-26D were also installed.
- In December 2010, the Offsite Groundwater Recovery System was started.
- In January 2011, the environmental management was transferred from GES to URS Corporation (URS).
- In March 2011, a Supplemental Site Assessment Report was submitted to MDE. The report detailed the installation of the recovery wells and monitoring well clusters required by the CAP Addendum and CAP Addendum approval with modifications.
- In November 2011, a Request to Modify Groundwater Sampling Schedule was submitted to MDE. The proposed sampling plan was to collect samples from the eight groundwater recovery wells, the most downgradient well clusters on each side of Bryants Nursery Road, and all former potable wells on a quarterly basis. On a biannual basis, a groundwater sample will be collected from every monitoring, recovery, and former potable well.
- In December 2011, MDE approved the Request to Modify Groundwater Sampling Schedule with the following modification: (1) include monitoring wells MW-24S, MW-24D, MW-25S, and MW-25D.
- On January 16, 2012, a Recovery Well Installation and Delineation Work Plan was submitted to MDE.
- On January 30, 2012, Motiva and URS presented the current status of the Site to the attendees of the Cloverly Civic Association Community Meeting.
- On January 31, 2012, MDE approved the Recovery Well Installation and Delineation Work Plan.
- On February 2, 2012, the onsite groundwater extraction system was shut down.
- On February 10, 2012, a Request for Access letter was sent to the residence of 721 Bryants Nursery Road for installation of two sentinel wells in their yard.

- In March 2012, recovery well RW-27 was installed.
- On April 2, 2012, URS sent email correspondence to MDE indicating that the resident of 721 Bryants Nursery Road denied installation of the two downgradient sentinel wells in their yard. Additionally, attached to the email correspondence was a map depicting two new proposed locations for the sentinel wells in the public right of way directly in front of 721 Bryants Nursery Road.
- On April 3, 2012, MDE approved, through email correspondence, the new locations of the sentinel wells in front of the residence of 721 Bryants Nursery Road contingent upon obtaining right of way access.
- From May 30 to June 1, 2012, the components of the onsite system were permanently disconnected and removed from the Site.
- In June 2012, trenching and piping was completed from an existing system hook-up located at recovery well RW-20 to recovery well RW-27.
- On July 23, 2012, operation of recovery well RW-27 began.
- From July 30 to August 2, 2012, two sentinel monitoring wells (721 BNS and 721 BND) were installed in the public right-of-way along Bryants Nursery Road in front of the residence at 721 Bryants Nursery Road.
- On September 4, 2012, a Well Installation Report was submitted to MDE.
- On November 5, 2012, letter correspondence from MDE was received indicating that the NPDES Discharge Permit (MDG916723) for the onsite system, which was permanently removed from the Site in June 2012, had been cancelled.
- On December 3, 2012, a proposal to over-drill recovery well RW-19 and install an 8-inch diameter recovery well into the same borehole was submitted via email to MDE.
- On December 10, 2012, the reinstallation of recovery well RW-19 was approved by MDE via email.
- In January 2013, recovery well RW-19 was destroyed by overdrilling, and recovery well RW-19A was installed in the same borehole.
- On February 21, 2013, a Well Installation Report was submitted to MDE.
- On August 6, 2013, an onsite well abandonment request was submitted for monitoring wells MW-02 and MW-04 as well as recovery wells RW-03 and RW-10.
- On June 17, 2014, representatives from MDE, Motiva, and URS met to discuss the current site status.
- On May 14, 2015, representatives from MDE, Motiva, and URS met to discuss the possibility of extending the city waterline to potable well homes and pulsing the system on a monthly basis.
- On June 12, 2015, the MDE approved the Revised Work Plan for Modification of Groundwater Recovery System Operation – May 19, 2015. Per the approval, pulsed operation of RW-22 and RW-23 will begin in July 2015 and additional sampling will be conducted to assess the impacts of the system pulsing, including the collection of monthly samples from 730 BND/BNS and quarterly samples from MW-06S/D, MW15S/D, and MW-17S/D/W.
- On July 6, 2015, RW-22 and RW-23 were shut off as part of the pulsed operations and rotated from operational to non-operational beginning on the first O&M event of each month following July.
- In June 2016, Sovereign Consulting Inc. (Sovereign) assumed environmental case management responsibilities.

### **Previous Reports**

- Work Plan & Tank Removal Report, February 2003
- Road Opening Permit, December 2005
- Subsurface Investigation Work Plan, May 2007, approved May 2007.
- Pilot Test Work Plan, May 2007, approved May 2007.
- Corrective Action Plan, May 2008
- Subsurface Investigation Work Plan, September 2008, approved by MDE October 2008
- Wooded Lot Site Assessment Report, December 2008, approved by MDE January 2009
- Revised Pump Test Work Plan, July 2009, approved by MDE August 2009
- Corrective Action Plan Addendum, November 2009, approved by MDE March 2010
- Corrective Action Plan Implementation Plan, approved September 2010
- Supplemental Site Assessment Report, March 2011
- Request to Modify Groundwater Sampling Schedule, November 2011, Approved December 2011
- Recovery Well Installation and Delineation Work Plan, January 2012, approved January 2012
- Well Installation Report, September 2012
- Well Installation Report, February 2013
- Draft Corrective Action Implementation Summary Report, October 2014

- Revised Work Plan for Modification of Groundwater Recovery System Operation – May 19, 2015, approved by MDE June 12, 2015

### III. ACTIVITIES THIS QUARTER

The activities completed this quarter are described in the following sections.

#### A. Groundwater Gauging and Monitoring

All Site monitoring wells (**Figure 3**) were gauged on April 19, 2016. During this quarter, depth to water measurements recorded from Site wells ranged from 4.76 ft bgs in monitoring well MW-09S to 47.47 ft bgs in recovery well RW-22 on April 19, 2016. Monitoring well MW-09D was not gauged this quarter due to inaccessibility. The groundwater gauging data is included as **Table 1**. The shallow hydraulic gradient for this quarter is illustrated on **Figure 4**. The deep overburden hydraulic gradient for this quarter is illustrated on **Figure 5**. The bedrock hydraulic gradient for this quarter is illustrated on **Figure 6**. Based on the April 19, 2016 gauging data, apparent groundwater flow direction is generally northwest from the Site in all three hydrologic zones. The shallow and deep overburden zones are influenced by the Offsite Groundwater Recovery System.

During April and May, weekly gauging was completed on select BNR monitoring wells (710 BNR, 711 BNR, 720 BNR, 721 BNR, and 740 BNR), which are former potable wells located offsite. During the month of June, bi-monthly gauging was conducted at these wells. These BNR well gauging frequency was increased to monitor the influence that the Offsite Groundwater Recovery System has on the water resource that supplies the potable wells. Based on the weekly and bi-monthly gauging events, the operation of the Offsite Groundwater Recovery System is not influencing the water resource supplying the potable wells. A graph showing the groundwater elevation trends over time for these wells is included in **Appendix A**.

#### B. Liquid Phase Hydrocarbons (LPH) Detection

LPH were not observed in any monitoring wells during the second quarter of 2016. LPH have never been observed at this Site.  
I

#### C. Groundwater Sampling from Recovery and Monitoring Wells

During the second quarter 2016, groundwater samples were collected from nine groundwater recovery wells (RW-01, RW-03, RW-10, RW-19A through RW-23, and RW-27), 41 monitoring wells (721 BND, 721 BNS, 730 BND, 730 BNS, 740 BNR, 750 BND, 750 BNS, MW-02, MW-04, MW-05D, MW-05S, MW-05R, MW-06D, MW-06R, MW-07D, MW-07S, MW-08D, MW-08S, MW-09S, MW-11D, MW-11R, MW-11S, MW-12, MW-13D, MW-13S, MW-14D, MW-14S, MW-15D, MW-15S, MW-16D, MW-16S, MW-17D, MW-17S, MW-17W, MW-18, MW-24D, MW-24S, MW-25D, MW-25S, MW-26D, and MW-26S), and six former potable wells (710 BNR, 711 BNR, 720 BNR, 721 BNR, 730 BNR, and 750 BNR). Six of the nine groundwater recovery wells (RW-19A through RW-23, and RW-27) and 730 BND and 730 BNS are located offsite and were sampled on a monthly basis. Monitoring well MW-09D was not sampled due to inaccessibility. All samples were submitted to SGS | Accutest Laboratories New Jersey (SGS | Accutest) under chain of custody for analysis of benzene, toluene, ethylbenzene, xylenes (collectively BTEX), methyl tert butyl ether (MTBE), and fuel oxygenates by Environmental Protection Agency (EPA) Method 8260C.

The laboratory analytical results are summarized in **Table 2**. Benzene, toluene, ethylbenzene, xylenes, total BTEX, MTBE, and tert butyl alcohol (TBA) concentrations for the second quarter 2016 sampling event are presented on **Figure 7**. The laboratory analytical reports are provided in **Appendix B**. Concentrations followed by lab flag “J” indicate an estimated value reported below the method detection limit. The maximum dissolved phase hydrocarbon concentrations, in micrograms per liter ( $\mu\text{g/L}$ ), of select analytes detected in the groundwater samples collected during this quarter are as follows:

- Benzene: 2.1  $\mu\text{g/L}$  (MW-14D) Sector: 240-640 feet from Site
- Toluene: 0.22  $\mu\text{g/L}$  (711 BNR) Sector: Greater than 640 feet from Site
- Ethylbenzene: No detections this quarter
- Total Xylenes: 0.73  $\mu\text{g/L}$  (711 BNR) Greater than 640 feet from Site
- Total BTEX: 2.3  $\mu\text{g/L}$  (MW-14D) Sector: 240-640 feet from Site
- MTBE: 2,740  $\mu\text{g/L}$  (MW-08D) Sector: 240-640 feet from Site
- TBA: 1,580  $\mu\text{g/L}$  (MW-14D) Sector: 240-640 feet from Site

Due to the number of monitoring wells and areal extent of the monitoring network, groundwater constituent concentrations trends have historically been discussed in terms of four sectors defined by distance from the original release area. The four sectors are defined as “onsite” (Former Shell Service Station Property), 80-240 feet from Site, 240-640 feet from Site, and greater than 640 feet from Site (**Figure 8**).

## 1. Groundwater Concentration Trends

Based upon review of historical analytical groundwater data, chemical concentrations in groundwater samples from all onsite and offsite monitoring wells indicate generally decreasing or stable benzene, BTEX, and MTBE dissolved-phase concentrations and concentrations below detection limits. Concentration trend analysis for all wells has typically been conducted and reported in Quarterly Status Reports. Based on a review of reported trend analyses for the period January 2015 through March 2016, only 10 wells have exhibited increasing trends for one or more compounds in at least one quarter over that time period, as summarized in the table below. Further, trend analysis was conducted on these wells using data collected through April 2016 and is presented in **Appendix C** and in the last column of the table below.

Well ID	Location Relative to Onsite	Period with Increasing Trend	Compounds with Increasing Trends in Past	Current Trend (thru April 2016)
MW-08D	240 to 640 ft	2Q2015; 3Q2015; 4Q2015; 1Q2016; 2Q2016	Benzene, BTEX, MTBE	Benzene No Trend BTEX Stable MTBE Increase
750 BNR	240 to 640 ft	2Q2015; 1Q2016; 2Q2016	Benzene, BTEX, MTBE	Benzene No Trend BTEX Stable MTBE Increase
MW-06S	240 to 640 ft	2Q2015	MTBE	Decrease
<i>MW-07D</i>	<i>80 to 240 ft</i>	<i>2Q2015; 3Q2015</i>	<i>MTBE</i>	<i>No Trend</i>
<i>MW-07S</i>	<i>80 to 240 ft</i>	<i>2Q2015; 3Q2015</i>	<i>MTBE</i>	<i>Decrease</i>
<i>MW-09D</i>	<i>80 to 240 ft</i>	<i>2Q2015; 3Q2015</i>	<i>MTBE</i>	<i>No Trend</i>
<i>MW-09S</i>	<i>80 to 240 ft</i>	<i>2Q2015; 3Q2015; 2Q2016</i>	<i>MTBE</i>	<i>Increase but Below Detection Limit</i>
<i>MW-11D</i>	<i>80 to 240 ft</i>	<i>2Q2015; 3Q2015; 2Q2016</i>	<i>MTBE</i>	<i>Probably Increase but Near Detection Limit</i>
MW-11R	80 to 240 ft	2Q2015; 3Q2015	MTBE	No Trend
TF-02	Onsite	2Q2015	MTBE	Decrease

Five of the wells (shown in italics above) showed increasing trends in MTBE in 2Q 2015 solely based on anomalously elevated MTBE concentrations detected in 2Q 2015 (MW-07D, MW-07S, MW-09D, MW-09S, and MW-11D).

As indicated, all wells currently exhibit decreasing, stable, or no trend for benzene and total BTEX. All wells currently exhibit decreasing or no trend in MTBE concentrations, with the exception of offsite wells MW-08D, 750 BNR, MW-09S and MW-11D. The increasing trend in MW-09S and MW-11D is due to the anomalously elevated MTBE concentrations detected in 2Q

2015; MTBE concentrations in MW-09S and MW-11D in April 2016 were non-detect and 0.71 ug/L, respectively; these wells typically exhibit stable trends in MTBE concentrations. Well 750 BNR has exhibited increasing trends in MTBE concentrations in Q2 2015 and Q2 2016 only; MW-08D has exhibited increasing trends in MTBE concentrations in all quarters since January 2015, and is the only well that has consistently exhibited an increasing trend in MTBE concentrations since 2Q2015.

In addition to the trend analysis described above, historical groundwater analytical data were evaluated for all onsite wells (MW-02, MW-04, RW-01, RW-03, RW-10, TF-01, and TF-02). The data are presented in **Table 2B**. The data clearly demonstrate these wells are either no longer impacted or are only marginally impacted. In RW-10, total BTEX and MTBE concentrations on January 12, 2016 were elevated; however, trend analysis indicates decreasing trends in total BTEX and MTBE through April 19, 2016 (**Appendix C**). Note, tank field wells TF-01 and TF-02 are of limited use in monitoring the aquifer, as these wells are isolated within the tank field and contact perched groundwater. Their primary use is to detect potential releases from current onsite operations within the tank cavity itself.

## 2. Groundwater Sampling from Potable Wells

Potable well samples were collected from 12 homes on Bryants Nursery Road (BNR) (600 BNR, 610 BNR, 611 BNR, 621 BNR, 640 BNR, 650 BNR, 651 BNR, 660 BNR, 661 BNR, 670 BNR, 700 BNR, and 701 BNR) from April 19 to April 21, 2016. (Table 3 and Figure 9). The samples were submitted to SGS | Accutest under chain of custody for analysis of full list VOCs and fuel oxygenates by EPA Method 524.2 REV 4.1. The following wells displayed detections above the laboratory reporting limit:

Well ID	Sampling Date	Detected Compound	Concentration	MDE Clean-up Concentration	Units
600 BNR	4/20/2016	Bromoform	0.51	80	µg/L
		MTBE	0.047 J	20	µg/L
601 BNR	4/21/2016	Acetone	1.2 J	550	µg/L
		Chloromethane	0.14 J	19	µg/L
610 BNR	4/20/2016	1,2-Dichloroethane	0.21 J	5	µg/L
		MTBE	0.071 J	20	µg/L
611 BNR	4/19/2016	Carbon disulfide	0.045 J	100	µg/L
621 BNR	4/19/2016	Bromodichloromethane	0.15 J	80	µg/L
		Carbon disulfide	0.041 J	100	µg/L
		Chloroform	2.9	80	µg/L
		Chloromethane	0.017 J	19	µg/L
		Dibromochloromethane	0.10 J	80	µg/L
		TBA	1.7 J	N/A	µg/L
640 BNR	4/19/16	Chloroform	0.059 J	80	µg/L
650 BNR	4/21/2016	MTBE	0.56	20	µg/L
651 BNR	4/21/16	Chloroform	0.25 J	80	µg/L
		p-Dichlorobenzene	0.068 J	75	µg/L
		MTBE	0.13 J	20	µg/L
660 BNR	4/20/2016	1,2-Dichloroethane	0.15 J	5	µg/L
661 BNR	4/19/2016	Chloroform	0.22 J	80	µg/L
		1,2-Dichloroethane	0.093 J	5	µg/L
		MTBE	0.18 J	20	µg/L
670 BNR	4/20/2016	1,2-Dichloroethane	0.13 J	5	µg/L
		MTBE	0.27 J	20	µg/L
700 BNR	4/20/2016	Chloroform	0.078 J	80	µg/L
		1,2-Dichloroethane	0.18 J	5	µg/L

Well ID	Sampling Date	Detected Compound	Concentration	MDE Clean-up Concentration	Units
701 BNR	4/20/2016	Di-Isopropyl ether	0.12 J	N/A	µg/L
		MTBE	0.55	20	µg/L
		Chloroform	0.082 J	80	µg/L
		1,2-Dichloroethane	0.27 J	5	µg/L
		MTBE	0.13 J	20	µg/L

Concentration detections for the potable well sampling are presented on **Figure 9**. The analytical laboratory reports for the 12 homes that were sampled are presented in **Appendix B**.

**IV. REMEDIATION SYSTEM OPERATION**

**A. Onsite Groundwater Recovery System**

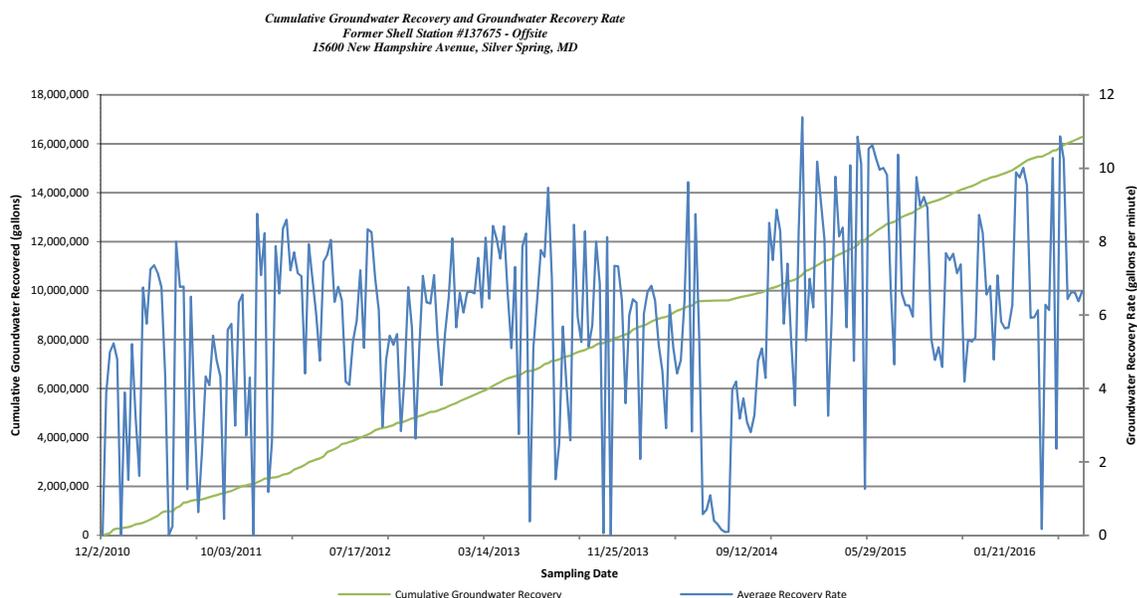

The Onsite Groundwater Recovery System was shut down with MDE approval on February 2, 2012. From May 30 to June 1, 2012, the components of the system were permanently disconnected and removed from the Site.

**B. Offsite Groundwater Recovery System**

The Offsite Groundwater Recovery System is connected to six wells (RW-19A through RW-23 and RW27). Recovery well RW-19 was turned off on January 18, 2013, and was destroyed by overdrilling. Within the same borehole, recovery well RW-19A was installed, and began operation on February 18, 2013. The recovery wells are screened between 10 and 65 ft bgs. Each well contains an electric submersible pump, which is designed to transfer fluids to the equalization (EQ) tank located inside the offsite groundwater pump and treat system trailer. After accumulating in the EQ tank, recovered groundwater is then pumped through two bag filters, an air stripper, two additional bag filters, and three 1,000-pound granular activated carbon vessels in series before discharging to the storm sewer. The Offsite Groundwater Recovery System was initialized in December 2010.

During the second quarter 2016, an approximate total of 731,182 gallons of groundwater was recovered and treated by the system. Since the system began operation, the system has recovered and treated approximately 16,283,538 gallons of groundwater. The average recovery rate in the second quarter 2016 was 7.26 gpm or 10,456 gallons per day (gpd). **Table 4** summarizes the cumulative groundwater recovery, average recovery rate, and operating recovery wells.

The below graph depicts the cumulative groundwater recovery and average groundwater recovery rate since the system began operation in December 2010.

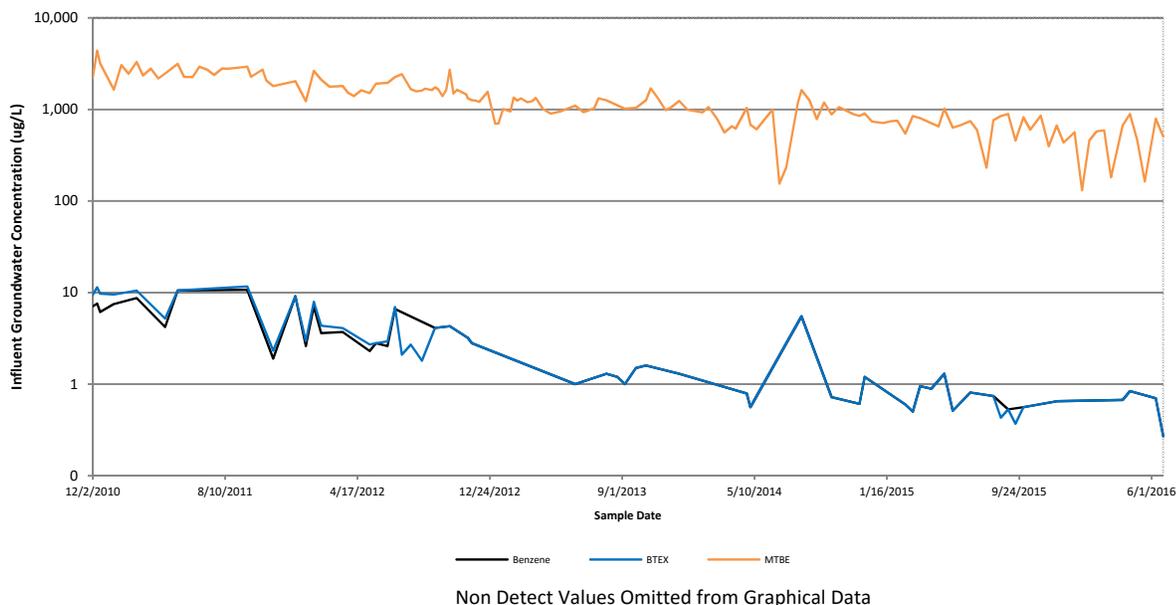

At the offsite location, system influent, mid-system 1, mid-system 2, mid-system 3, and effluent samples are collected to determine hydrocarbon recovery and treatment. Analytical results of these system samples are summarized in **Table 5**, and the laboratory analytical reports are included in **Appendix D**.

Since system startup in December 2010, system influent groundwater concentrations have remained below detection limits or have been slowly decreasing.

- Influent benzene concentrations have decreased from a concentration of 7.08 µg/L on December 2, 2010 to 0.27 µg/L on June 23, 2016.
- Influent toluene concentrations have remained below detection limits from December 2, 2010 through June 23, 2016.
- Influent ethylbenzene concentrations have generally remained below detection limits from December 2, 2010 through June 23, 2016.
- Influent total xylene concentrations have decreased from a concentration of 2.35 µg/L on December 2, 2010 to below detection limits on June 23, 2016.
- Influent total BTEX concentrations have decreased from a concentration of 9.43 µg/L on December 2, 2010 to 0.27 µg/L on June 23, 2016.
- Influent MTBE concentrations have decreased from a concentration of 2,230 µg/L on December 2, 2010 to 509 µg/L on June 23, 2016.

The concentration trends of dissolved-phase MTBE, Benzene, and total BTEX in the system influent groundwater samples can be observed on the below graph. The concentration of MTBE has decreased by one order of magnitude since system operation began, and has been generally between 100 and 1,000 µg/L since early 2014. Benzene and total BTEX concentrations have decreased by one order of magnitude since system operation began, and have been generally between non-detect and 1 µg/L since early 2014.

*Influent Groundwater Concentrations Over Time  
Former Shell Service Station #137675 - Offsite  
15600 New Hampshire Avenue, Silver Spring, MD*

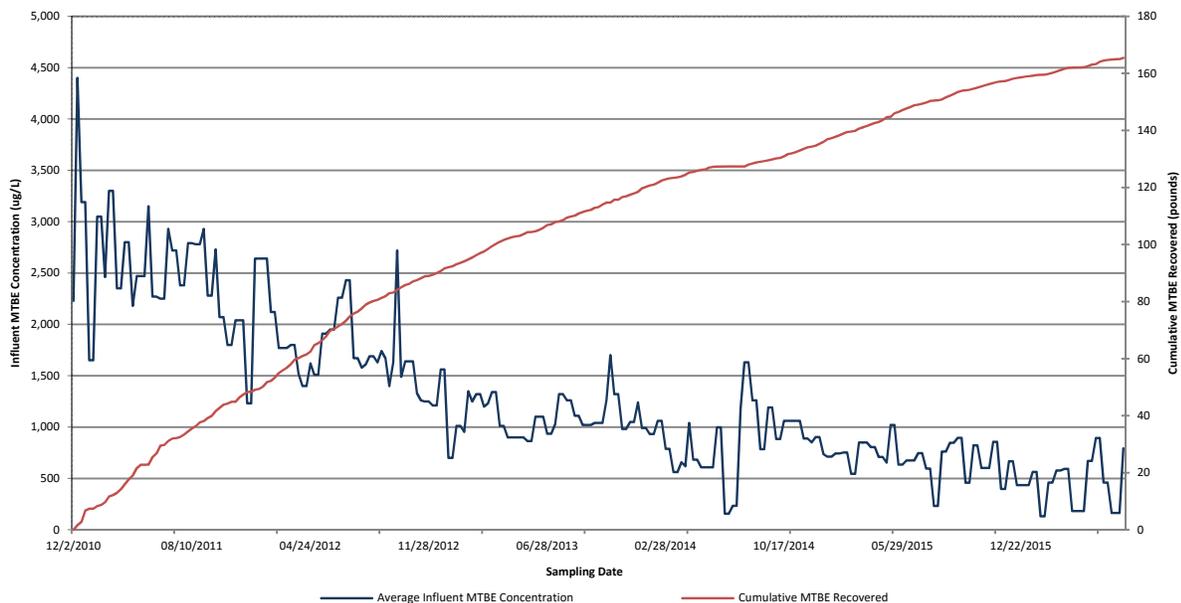

During the second quarter 2016, approximately 3.28 pounds of MTBE were recovered in the dissolved phase; since the offsite system began operation, approximately 162.16 pounds of MTBE have been recovered in the dissolved phase from groundwater.

Influent MTBE concentrations and cumulative MTBE recovered are presented in the below graph. As illustrated on this graph, MTBE influent concentrations have been relatively steady since mid-2015, indicating that the limits of recovery have been reached under current system operating conditions.

Over the two year period from July 1, 2014 through June 30, 2016, the system recovered an average of 73,935 gallons of groundwater and 0.23 lb MTBE per month. This is the equivalent of 3 lb of MTBE recovered per million gallons of groundwater recovered. In the six years that the system has been operating both MTBE and total BTEX concentrations have decreased by an order of magnitude.

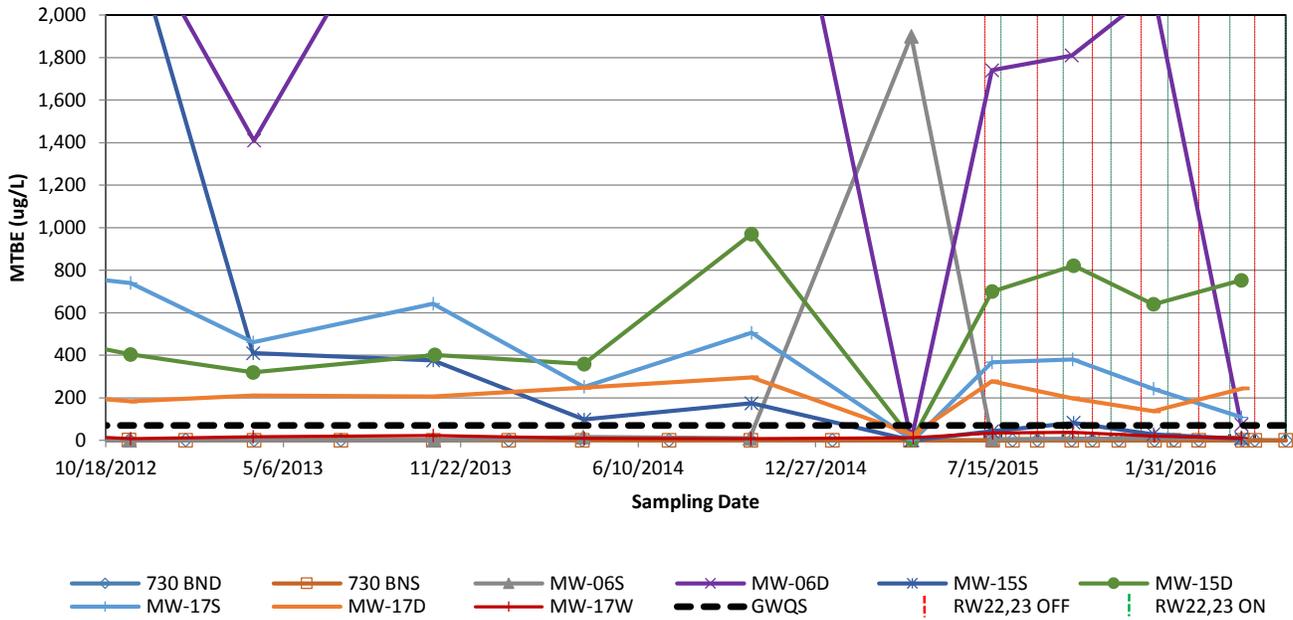

*Influent MTBE Concentrations and Cumulative MTBE Recovered  
Former Shell Service Station #137675 - Offsite  
15600 New Hampshire Avenue, Silver Spring, MD*

On June 12, 2015, the MDE approved the Revised Work Plan for Modification of Groundwater Recovery System Operation – May 19, 2015. Per the approval, pulsed operation of the two most upgradient recovery wells, RW-22 and RW-23, began on July 6, 2015, the first O&M event of the month. During this event, operation of the two recovery wells was shut down and left offline for a month before it was restarted during the O&M event on August 6, 2015. Operation of RW-22 and RW-23 has continued to rotate on and off each month, as shown in the following figure.

Additional sampling is conducted to assess the impacts of the system pulsing on offsite groundwater, including the collection of monthly samples from downgradient “sentinel” monitoring wells 730 BND/BNS, and quarterly samples from monitoring wells MW-06S/D, MW-15S/D, and MW-17S/D/W which are located near the two recovery wells. Current analytical results for these wells indicate that concentrations in each have remained stable compared to historical ranges, suggesting that system pulsing is not affecting groundwater concentrations, as indicated in the figure below.

**Groundwater MTBE Concentration - Wells Near RW-22 and RW-23**  
**Former Shell Service Station #137675**  
**15600 New Hampshire Avenue, Silver Spring, MD**

System influent concentrations in samples collected since pulsing began suggest that the shutdown of recovery wells RW22 and RW23 results in a drop in observed MTBE influent concentrations in samples collected several weeks after shutdown. MTBE concentrations then appear to rebound within the next few weeks, reaching their normal levels before the wells are restarted. While some fluctuations have been observed, the current influent sampling results indicate no apparent correlation between system pulsing and hydrocarbon concentrations in groundwater in the recovery wells. These fluctuations can be seen in the two Influent Concentration graphs above.

**V. WORK PLANNED FOR THIRD QUARTER 2016**

Motiva respectfully requests approval of the operation and monitoring schedule modifications provided in the following table. Support for the modifications is provided below. Motiva will continue to conduct field activities on the current schedule until otherwise advised by MDE.

Item No.	Current Schedule	Proposed Modification
1	Monthly sampling offsite recovery wells (RW-19A, RW-20, RW-21, RW-22, RW-23, and RW-27)	<b>No Change</b> Monthly sampling offsite recovery wells (RW-19A, RW-20, RW-21, RW-22, RW-23, and RW-27)
2	Monthly sampling 730 BND and 730 BNS (sentinel wells)	<b>No Change</b> Monthly sampling 730 BND and 730 BNS (sentinel wells)
3	<b>Quarterly</b> sampling of all onsite wells (MW-02, MW-04, RW-01, RW-03, RW-10, TF-01, and TF-02)	<b>Eliminate</b> sampling of all onsite wells (MW-02, MW-04, RW-01, RW-03, RW-10, TF-01, and TF-02)
4	<b>Weekly</b> gauging of former potable wells (710 BNR, 711 BNR, 720 BNR, 721 BNR, 730 BNR, 740 BNR)	<b>Bi-weekly</b> gauging of former potable wells (710 BNR, 711 BNR, 720 BNR, 721 BNR, 730 BNR, 740 BNR)
5	<b>Quarterly</b> gauging and sampling of recovery and monitoring wells not specified above	<b>Semi-Annual</b> gauging and sampling of recovery and monitoring wells not specified above
6	Q1 and Q3, <b>Reduced</b> Sampling	Q1 and Q3, <b>Full</b> Sampling
7	Q2 and Q4, <b>Full</b> Sampling	Q2 and Q4, <b>No</b> Sampling other than that listed above
8	Pulse offsite RW-22 and RW-23 monthly	Pulse <b>all</b> offsite RWs monthly (RW-19A, RW-20, RW-21, RW-22, RW-23, and RW-27)
9	<b>Weekly</b> operation and maintenance (O&M) and <b>bi-weekly</b> sampling of the Offsite Groundwater Recovery System.	<b>Bi-weekly</b> operation and maintenance (O&M) and <b>bi-weekly</b> sampling of the Offsite Groundwater Recovery System.
10	<b>Quarterly</b> Status Report submittal	<b>Semi-Annual</b> Status Report submittal (Q2 and Q4)

**A. Support for Proposed Modifications**

**Eliminate Sampling of All Onsite Wells**

Onsite monitoring wells, recovery wells (inactive), and tankfield wells have historically been monitored on a quarterly basis for six years. As discussed above and presented in **Table 2B** and **Appendix C**, data and trend evaluation of these wells indicates that they are no longer impacted or are marginally impacted. MTBE and BTEX are typically either not detected or detected slightly above the detection limit in these wells. Monitoring of these wells no longer provides information relevant to evaluation of groundwater impacts, as impacts are monitored offsite. Monitoring of downgradient, offsite wells and collection of potable water samples at the downgradient residences will continue at a frequency sufficient to provide evaluation of groundwater impacts and to be protective of potential downgradient receptors. Additionally, the offsite groundwater recovery system will continue to operate.

**Biweekly Gauging of Former Potable Wells**

These wells have historically been gauged weekly. Changing the frequency to bi-weekly will continue to provide sufficient data to evaluate groundwater flow direction.

**Semi-Annual Gauging and Sampling of Recovery and Monitoring Wells not otherwise specified**

Groundwater gauging and sampling of all onsite and offsite wells has occurred at a minimum on a quarterly basis since monitoring began in December 2010. This has provided adequate data to demonstrate attenuation of MTBE and BTEX compounds in most onsite and offsite wells over that time period. As discussed above, BTEX and MTBE concentrations trends are decreasing or stable for most wells, and increasing trends in MTBE have been observed only in wells 750 BNR and MW-08D on a consistent basis, approximately 340 to 400 ft downgradient of onsite. Reducing the frequency of gauging and sampling from quarterly to semi-annually will provide sufficient data to continue to evaluate potential impacts and concentration trends and to determine groundwater flow direction. A schedule of sampling in the first quarter (Q1) and third quarter (Q3) is proposed.

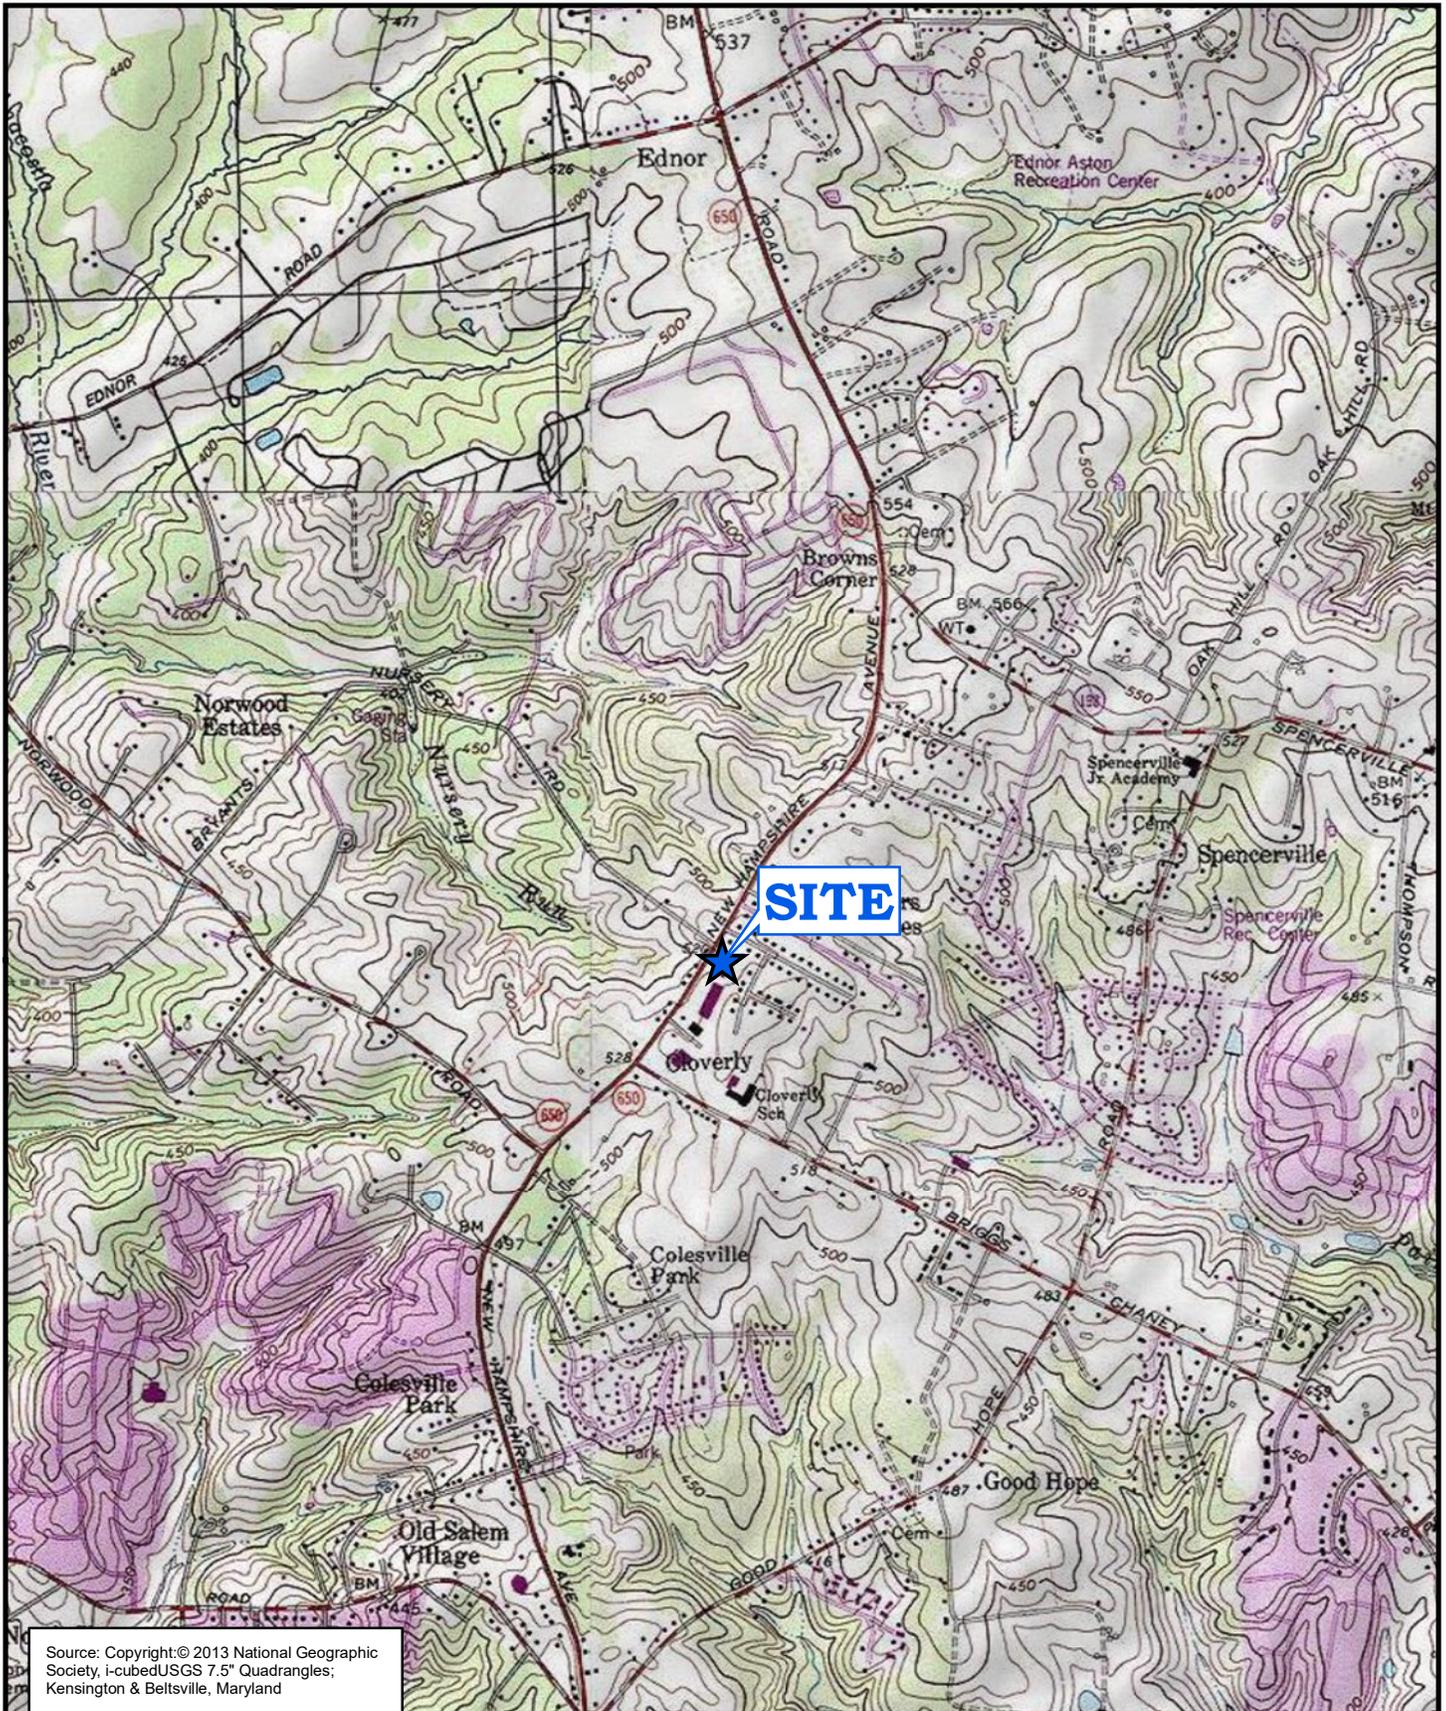

**Pulse All Offsite RWs monthly (RW-19A, RW-20, RW-21, RW-22, RW-23, and RW-27)**

As shown in the Influent Concentration graphs above, the concentration of MTBE and total BTEX in the Offsite Groundwater Recovery System influent appeared to reach an asymptote in mid-2015. Although the system has removed over 160 lb of MTBE in a 6 year period of operation, current MTBE mass recovery rates are extremely low. In an attempt to improve system recovery, pulsing of wells RW-22 and RW-23 was started in July of 2015. As discussed in Section VI.B., this pulsing has not improved system recovery. Pulsing of all of the recovery wells on a monthly basis is proposed to improve system recovery. Turning off all of the recovery wells will allow the water table to rise and desorb MTBE and BTEX that may be present in the capillary zone, transferring it to the aqueous phase for improved recovery by the system when the wells are turned on. This mode of operation is proposed for one year. Recovery wells will continue to be sampled monthly, and continued monitoring as proposed above will be sufficient to evaluate system performance and groundwater quality.

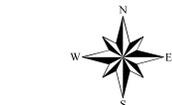

**Weekly System O&M**

Weekly O&M visits have been conducted since the system began operation. The system runs well and requires little maintenance. Monitoring consists of collecting flow readings and other operational data, and collecting bi-weekly system samples for laboratory analysis. A change from weekly to bi-weekly monitoring, and a retention of bi-weekly system sampling will provide sufficient operational data and maintenance checks.

**Notes:**

BTEX - Benzene, Toluene, Ethylbenzene, Xylenes  
MTBE - Methyl tert-Butyl Ether  
TBA - Tertiary Butyl Alcohol  
TPH-GRO - Total Petroleum Hydrocarbons Gasoline Range Organics  
TPH-DRO - Total Petroleum Hydrocarbons Diesel Range Organics  
µg/l - micrograms per litre

ND - Not Detected  
ND(100) - Not Detected (Reporting Limit)  
NS - Not Sampled  
I - Results between Reporting Limit and Method Detection Limit  
J - Estimated Value

**Notes:**

BTEX - Benzene, Toluene, Ethylbenzene, Xylenes  
MTBE - Methyl tert-Butyl Ether  
TBA - Tertiary Butyl Alcohol  
TPH-GRO - Total Petroleum Hydrocarbons Gasoline Range Organics  
TPH-DRO - Total Petroleum Hydrocarbons Diesel Range Organics  
µg/l - micrograms per litre

ND - Not Detected  
ND(100) - Not Detected (Reporting Limit)  
NS - Not Sampled  
I - Results between Reporting Limit and Method Detection Limit  
J - Estimated Value

**NOTES:**

- gal - Gallons
- gpm - Gallons per minute
- ug/L - Micrograms per liter
- lbs - Pounds
- MTBE - Methyl tert-butyl ether
- NC - Not Collected
- Average Flow Rate = Volume Recovered (gal) / Days of Operation / 1440 (min/day)
- MTBE Recovered per Period (lb) = Volume Recovered (gal) \* 3.775 \* MTBE \* 2.208\*10E9

**Notes:**

ug/L - Micrograms per liter

BTEX - Benzene, Toluene, Ethylbenzene, Xylenes

MTBE - Methyl tert-butyl ether

TPH-DRO - Total Petroleum Hydrocarbons - Diesel Range Organics

TPG-DRO - Total Petroleum Hydrocarbons - Gasoline Range Organics

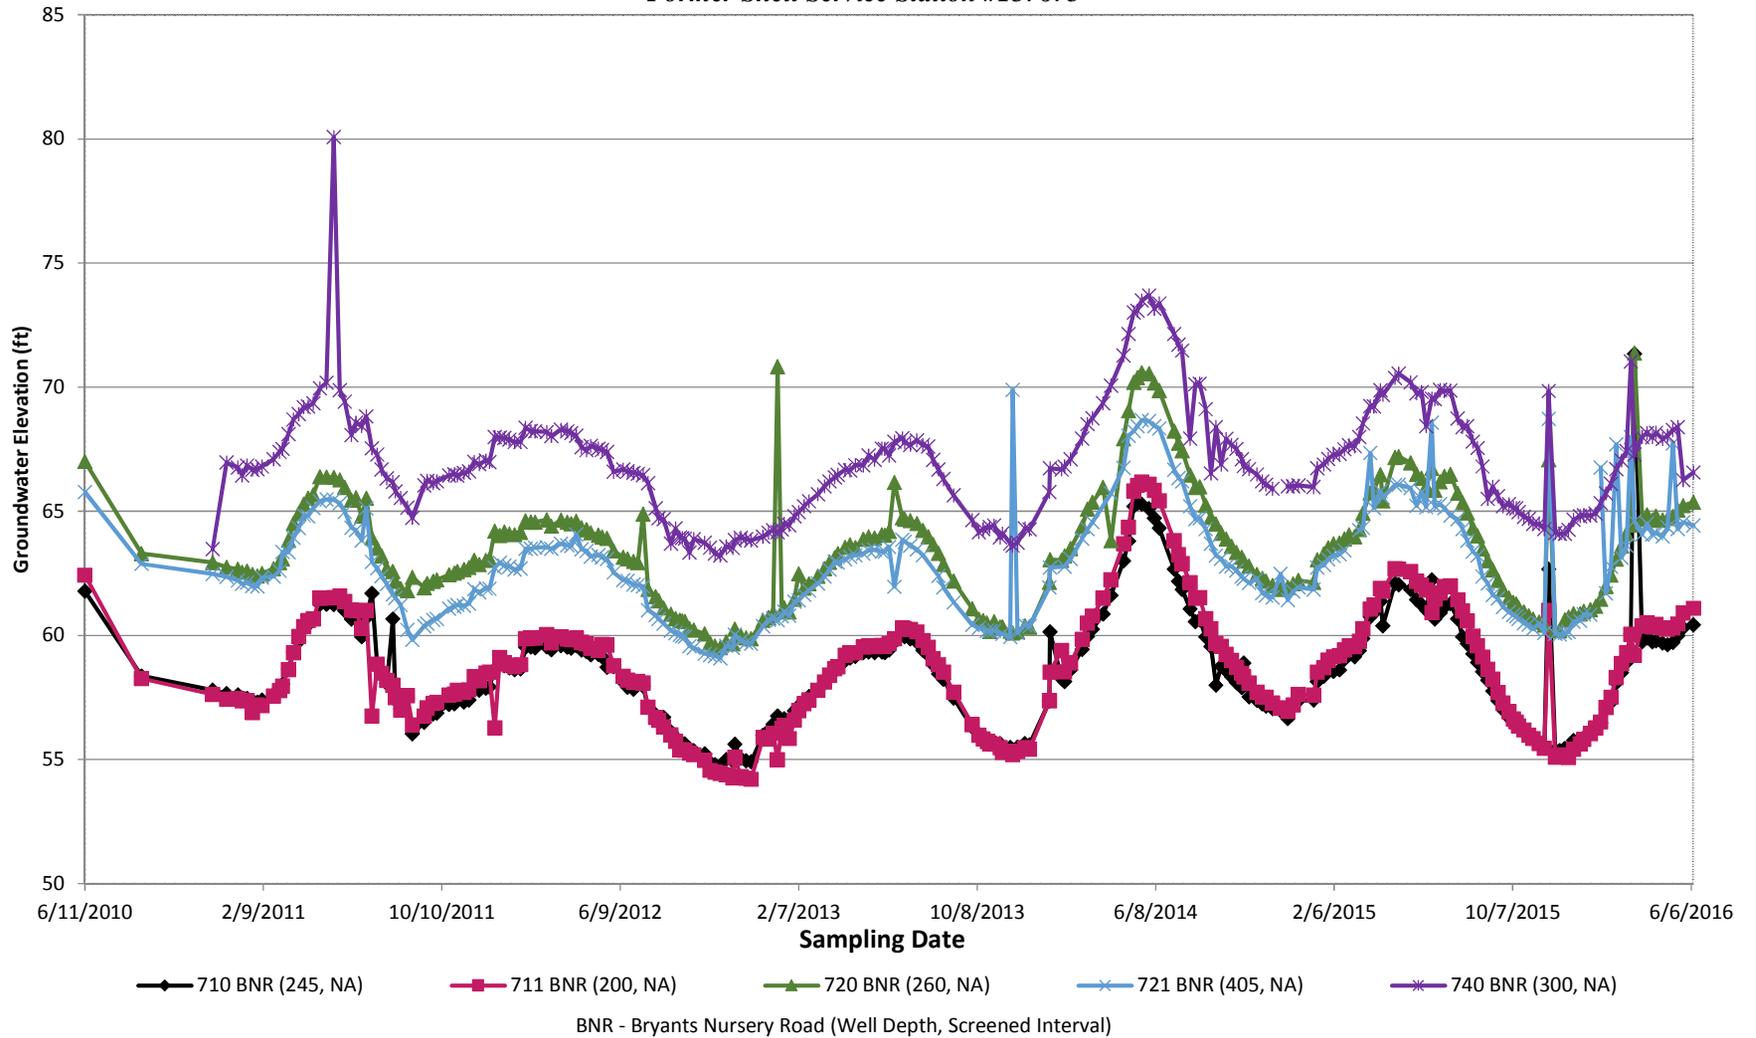

ND - Below laboratory detection limit

ND(#) - Not Detected (Reporting Limit)

NS - Not Sampled

### Technical Report for

## Shell Oil Products US

URSMDG:SS#137675, 15541 New Hampshire Avenue, Silver Spring, MD

INC#97436977

SGS Accutest Job Number: JC18863

Sampling Dates: 04/19/16 - 04/21/16

### Report to:

**Sovereign Consulting**

**nahern@sovcon.com**

**ATTN: Natalie Ahern**

**Total number of pages in report: 79**

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Program and/or state specific certification programs as applicable.

**Nancy Cole  
Laboratory Director**

**Client Service contact: Victoria Pushkova 732-329-0200**

Certifications: NJ(12129), NY(10983), CA, CT, DE, FL, IL, IN, KS, KY, LA, MA, MD, MI, MT, NC, OH VAP (CL0056), AK (UST-103), AZ (AZ0786), PA, RI, SC, TN, TX, VA, WV, DoD ELAP (L-A-B L2248)

This report shall not be reproduced, except in its entirety, without the written approval of SGS Accutest.  
Test results relate only to samples analyzed.

## CASE NARRATIVE / CONFORMANCE SUMMARY

**Client:** Shell Oil Products US

**Job No** JC18863

**Site:** URSMDG:SS#137675, 15541 New Hampshire Avenue, Silver Sprin

**Report Date** 5/4/2016 12:59:10 PM

On 04/22/2016, 53 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 4.5 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of JC18863 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

### Volatiles by GCMS By Method SW846 8260C

**Matrix:** AQ **Batch ID:** V1A6867

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC18620-2MS, JC18620-2MSD were used as the QC samples indicated.

**Matrix:** AQ **Batch ID:** V1A6868

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC18863-31MS, JC18863-31MSD were used as the QC samples indicated.

**Matrix:** AQ **Batch ID:** V1A6869

- All samples were analyzed within the recommended method holding time.
- Sample(s) JC18965-1DUP, JC18965-2MS were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

**Matrix:** AQ **Batch ID:** V1A6870

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC19031-1MS, JC19031-2DUP were used as the QC samples indicated.

**Matrix:** AQ **Batch ID:** V1A6871

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC19069-1DUP, JC19069-2MS were used as the QC samples indicated.

**Matrix:** AQ **Batch ID:** V2D6509

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC18863-12MS, JC18863-13DUP were used as the QC samples indicated.

**Matrix:** AQ **Batch ID:** V2D6510

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC18937-2MS, JC18937-2MSD were used as the QC samples indicated.

**Matrix:** AQ **Batch ID:** V2D6512

- All samples were analyzed within the recommended method holding time.
- Sample(s) JC18863-7MS, JC18863-8DUP were used as the QC samples indicated.

## Volatiles by GCMS By Method SW846 8260C

**Matrix:** AQ

**Batch ID:** V2D6512

- All method blanks for this batch meet method specific criteria.

**Matrix:** AQ

**Batch ID:** V2D6514

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC19046-1MS, JC19046-1MSD were used as the QC samples indicated.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

637-92-3	tert-Butyl Ethyl Ether	ND	2.0	0.62	ug/l	

CAS No.	Surrogate Recoveries	Run# 1	Run# 2	Limits
1868-53-7	Dibromofluoromethane	103%		76-120%
17060-07-0	1,2-Dichloroethane-D4	98%		73-122%
2037-26-5	Toluene-D8	97%		84-119%
460-00-4	4-Bromofluorobenzene	99%		78-117%

ND = Not detected      MDL = Method Detection Limit      J = Indicates an estimated value  
 RL = Reporting Limit      B = Indicates analyte found in associated method blank  
 E = Indicates value exceeds calibration range      N = Indicates presumptive evidence of a compound

## CASE NARRATIVE / CONFORMANCE SUMMARY

**Client:** Shell Oil Products US

**Job No** JC17898

**Site:** URSMDG:SS#137675, 15541 New Hampshire Avenue, Silver Sprin

**Report Date** 4/19/2016 4:45:33 PM

On 04/08/2016, 6 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 4 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of JC17898 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

### Volatiles by GCMS By Method SW846 8260C

<b>Matrix:</b> AQ	<b>Batch ID:</b> V2E5422
-------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC17898-4MS, JC17898-4MSD were used as the QC samples indicated.
- Matrix Spike Duplicate Recovery(s) for Methyl Tert Butyl Ether are outside control limits. Outside control limits due to high level in sample relative to spike amount.

<b>Matrix:</b> AQ	<b>Batch ID:</b> V2E5423
-------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC18011-1DUP, JC18011-3MS were used as the QC samples indicated.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

### Technical Report for

Shell Oil Products US

URSMDG:SS#137675, 15541 New Hampshire Avenue, Silver Spring, MD

INC#97436977

SGS Accutest Job Number: JC19776

Sampling Date: 05/05/16

Report to:

Sovereign Consulting

nahern@sovcon.com

ATTN: Natalie Ahern

Total number of pages in report: **23**

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Program and/or state specific certification programs as applicable.

Nancy Cole  
Laboratory Director

Client Service contact: Victoria Pushkova 732-329-0200

Certifications: NJ(12129), NY(10983), CA, CT, DE, FL, IL, IN, KS, KY, LA, MA, MD, MI, MT, NC, OH VAP (CL0056), AK (UST-103), AZ (AZ0786), PA, RI, SC, TN, TX, VA, WV, DoD ELAP (L-A-B L2248)

This report shall not be reproduced, except in its entirety, without the written approval of SGS Accutest.  
Test results relate only to samples analyzed.

## CASE NARRATIVE / CONFORMANCE SUMMARY

**Client:** Shell Oil Products US

**Job No** JC19776

**Site:** URSMDG:SS#137675, 15541 New Hampshire Avenue, Silver Sprin

**Report Date** 5/18/2016 3:19:18 PM

On 05/06/2016, 8 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 3.1 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of JC19776 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

### Volatiles by GCMS By Method SW846 8260C

**Matrix:** AQ **Batch ID:** V2D6529

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC19886-3MS, JC19886-3MSD were used as the QC samples indicated.

**Matrix:** AQ **Batch ID:** V2V1269

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC19886-2MS, JC19886-2MSD were used as the QC samples indicated.

**Matrix:** AQ **Batch ID:** V3B5675

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC19749-26MS, JC19749-27DUP were used as the QC samples indicated.

**Matrix:** AQ **Batch ID:** V3B5676

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC19776-3DUP, JC19786-1MS were used as the QC samples indicated.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Custody Documents and Other Forms

---

Includes the following where applicable:

- Certification Exceptions
- Chain of Custody

## Parameter Certification Exceptions

**Job Number:** JC19776

**Account:** SHELLWIC Shell Oil Products US

**Project:** URSMDG:SS#137675, 15541 New Hampshire Avenue, Silver Spring, MD

The following parameters included in this report are exceptions to NELAC certification. The certification status of each is indicated below.

Parameter	CAS#	Method	Mat	Certification Status
Methylene bromide	74-95-3	SW846 8260C	AQ	Accutest is not certified for this parameter.

Certification exceptions shown are based on the New Jersey DEP certifications. Applicability in other states may vary. Please contact your laboratory representative if additional information is required for a specific regulatory program.

Custody Documents and Other Forms

---

Includes the following where applicable:

- Certification Exceptions
- Chain of Custody

## Parameter Certification Exceptions

**Job Number:** JC22010

**Account:** SHELLWIC Shell Oil Products US

**Project:** SCNJL: INC#97436977, 15541 New Hampshire Avenue, Silver Spring, MD

The following parameters included in this report are exceptions to NELAC certification. The certification status of each is indicated below.

Parameter	CAS#	Method	Mat	Certification Status
-----------	------	--------	-----	----------------------

Methylene bromide	74-95-3	SW846 8260C	AQ	Accutest is not certified for this parameter.
-------------------	---------	-------------	----	---

Certification exceptions shown are based on the New Jersey DEP certifications. Applicability in other states may vary. Please contact your laboratory representative if additional information is required for a specific regulatory program.

### Technical Report for

Shell Oil Products US

URSMDG:SS#137675, 15541 New Hampshire Avenue, Silver Spring, MD

INC#97436977

SGS Accutest Job Number: JC18858

Sampling Dates: 04/19/16 - 04/21/16

Report to:

Sovereign Consulting

nahern@sovcon.com

ATTN: Natalie Ahern

Total number of pages in report: **65**

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Program and/or state specific certification programs as applicable.

Nancy Cole  
Laboratory Director

## CASE NARRATIVE / CONFORMANCE SUMMARY

**Client:** Shell Oil Products US

**Job No** JC18858

**Site:** URSMDG:SS#137675, 15541 New Hampshire Avenue, Silver Sprin

**Report Date** 5/5/2016 9:42:41 AM

On 04/22/2016, 16 Sample(s), 1 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 3 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of JC18858 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

### Volatiles by GCMS By Method EPA 524.2 REV 4.1

**Matrix:** AQ **Batch ID:** V1B4900

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC18858-12MS, JC18858-12MSD were used as the QC samples indicated.

**Matrix:** AQ **Batch ID:** V1B4901

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC18991-1MS, JC18991-2DUP were used as the QC samples indicated.
- RPD(s) for Duplicate for Tertiary Butyl Alcohol are outside control limits. High RPD due to low concentration of hit

**Matrix:** AQ **Batch ID:** V4D3003

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC18955-1MS, JC18955-2DUP were used as the QC samples indicated.
- RPD(s) for Duplicate for Carbon disulfide, Tertiary Butyl Alcohol are outside control limits. High RPD due to possible sample analyzed from different vials.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

**Notes:**

- At least four independent sampling events per well are required for calculating the trend. *Methodology is valid for 4 to 40 samples.*
- Confidence in Trend = Confidence (in percent) that constituent concentration is increasing (S>0) or decreasing (S<0): >95% = Increasing or Decreasing; ≥ 90% = Probably Increasing or Probably Decreasing; < 90% and S>0 = No Trend; < 90%, S≤0, and COV ≥ 1 = No Trend; < 90% and COV < 1 = Stable.
- Methodology based on "MAROS: A Decision Support System for Optimizing Monitoring Plans", J.J. Aziz, M. Ling, H.S. Rifai, C.J. Newell, and J.R. Gonzales, *Ground Water*, 41(3):355-367, 2003.

## CASE NARRATIVE / CONFORMANCE SUMMARY

**Client:** Shell Oil Products US

**Job No** JC18852

**Site:** URSMDG:SS#137675, 15541 New Hampshire Avenue, Silver Sprin

**Report Date** 5/3/2016 10:06:49 AM

On 04/22/2016, 5 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 2.7 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of JC18852 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

### Volatiles by GCMS By Method SW846 8260C

**Matrix:** AQ **Batch ID:** V2B6252

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC18904-3MS, JC18904-3MSD were used as the QC samples indicated.

**Matrix:** AQ **Batch ID:** VU9420

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC18956-5DUP, JC18956-6MS were used as the QC samples indicated.

### Volatiles by GC By Method SW846 8015C

**Matrix:** AQ **Batch ID:** GUV5254

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC18852-2MS, JC18852-2MSD were used as the QC samples indicated.

### Extractables by GC By Method SW846 8015C

**Matrix:** AQ **Batch ID:** OP93325

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC18856-9MS, JC18856-9MSD were used as the QC samples indicated.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

## CASE NARRATIVE / CONFORMANCE SUMMARY

**Client:** Shell Oil Products US

**Job No** JC19764

**Site:** URSMDG:SS#137675, 15541 New Hampshire Avenue, Silver Sprin

**Report Date** 5/13/2016 11:49:47 A

On 05/06/2016, 5 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 2.9 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of JC19764 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

### Volatiles by GCMS By Method SW846 8260C

**Matrix:** AQ **Batch ID:** V1A6881

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC19773-4MS, JC19773-4MSD were used as the QC samples indicated.

**Matrix:** AQ **Batch ID:** V1A6882

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC19746-1MS, JC19746-1MSD were used as the QC samples indicated.

### Volatiles by GC By Method SW846 8015C

**Matrix:** AQ **Batch ID:** GUV5271

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC19764-2MS, JC19764-2MSD were used as the QC samples indicated.

### Extractables by GC By Method SW846 8015C

**Matrix:** AQ **Batch ID:** OP93705

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC19764-1MS, JC19764-1MSD were used as the QC samples indicated.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

## CASE NARRATIVE / CONFORMANCE SUMMARY

**Client:** Shell Oil Products US

**Job No** JC20713

**Site:** URSMDG:SS#137675, 15541 New Hampshire Avenue, Silver Sprin

**Report Date** 5/27/2016 11:06:45 A

On 05/20/2016, 5 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at SGS Accutest at a maximum corrected temperature of 4.5 C. Samples were intact and chemically preserved, unless noted below. A SGS Accutest Job Number of JC20713 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

### Volatiles by GCMS By Method SW846 8260C

<b>Matrix:</b> AQ	<b>Batch ID:</b> V2C6247
-------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC20562-2MS, JC20562-2MSD were used as the QC samples indicated.
- Matrix Spike /Matrix Spike Duplicate Recovery(s) for Xylene (total) are outside control limits. Outside control limits due to high level in sample relative to spike amount.

### Volatiles by GC By Method SW846 8015C

<b>Matrix:</b> AQ	<b>Batch ID:</b> GUV5283
-------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC20713-2MS, JC20713-4DUP were used as the QC samples indicated.

### Extractables by GC By Method SW846 8015C

<b>Matrix:</b> AQ	<b>Batch ID:</b> OP94201
-------------------	--------------------------

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC20713-1MS, JC20713-1MSD were used as the QC samples indicated.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover
