2022 WIIN 2107 Grant Funding Poll

Dear Local Educational Agency Representative:

The Maryland Department of the Environment (MDE) has recently been awarded grant funding from the U.S. Environmental Protection Agency (EPA) under the Water Infrastructure Improvements for the Nation (WIIN) Act, Section 2107, to assist local educational agencies (LEAs) with testing for and removing sources of lead in drinking water at schools.

In order for MDE to assess LEAs' level of interest in applying for the grant, and to facilitate MDE's implementation of the program, we are asking that each school district participate in this short poll (i.e. one required and three optional questions). We also ask that each LEA designate one person to complete the poll on behalf of the entire school district (i.e., only one response per LEA).

If you have any questions, please email MDE's Water Supply Program (WSP) at reporting.leadsschoolwater@maryland.gov or call at (410) 537-3729.

Thank you for your prompt attention to this important matter.

Please complete this poll by March XX, 2022.

* Required

What is the likelihood that your school district would apply to receive funding for remediation projects under this program? *

- Very unlikely
- Somewhat unlikely
- Neither likely nor unlikely
- Somewhat likely
- Very likely

[Optional] Estimated number of schools for which your school district may be seeking funds?

Your answer

[Optional] Types of remediation (completed or planned) for which your school district may be seeking funding (select all that apply).

- Permanently close access to outlet (e.g., physically disconnect from water supply system).
- Remove the outlet.
- Install and maintain a point of use filter at the outlet.
- Repair the outlet, plumbing, or service line contributing to the elevated level of lead.
- Reconfigure the outlet, plumbing, or service line contributing to the elevated level of lead.
- Replace the outlet, plumbing, or service line contributing to the elevated level of lead.

Install and maintain automatic flushing of outlets after testing confirms that the lead level in the outlet after flushing is not elevated.

Check grounding wires. If existing wires are grounded to water pipes and causing corrosion issues, find an alternative grounding system.

Other: _____

[Optional] What is a general estimate of the amount of funding your school district may be seeking?
